

» Using census data to assist in sampling of survey on ethnic discrimination

Joao Lopes

Afshin Ashofteh

DMSI / ME
 April 2024

0

 Aim

» Create groups of parishes with target population

- Use socio-demographic data from population census;
- Group the 3092 parishes of Portugal;
- Select for marginal population and ethnic minorities.

» Assist in survey on ethnic discrimination

- Survey on Living Conditions, Origins and Trajectories of Population Resident in Portugal (ICOT);
- Sampling scheme accounting for selected groups of parishes.

Introduction > procedure

» Procedure

1. Collect socio-demographic data from population census
2. Collect geospatial data of parishes
3. Create hierarchical cluster tree;
4. Create geospatial maps of clusters;
5. Select important clusters of parishes.

» Software

- Use R (main packages “ROracle”, “NbClust”, “sf”, “dendextend”).

» 02/15

2

Data > data source

» 37 variables from ‘Censos 21’ (Statistics Portugal)

- Sex-ratio (2 categories);
- Literacy (1 category);
- Education (11 categories);
- Place-of-birth (12 categories);
- Religion (11 categories);

[at individual-level]

» Geospatial data from <http://dados.gov.pt>

- Shapefiles of Portuguese parishes (“Freguesias”).

» 03/15

3

2

Data > data merging

» Create final dataset

- Percentages for each category of variables at parish-level;
- Selection of categories (25) related to presence of discrimination;
- Merge geographical information.

ID	Female	illiterate	Nenhum		BRA	...	Orthodox	...
10103	52%	7%	7%	...	2%	...	1%	...
10109	52%	5%	6%	...	1%	...	1%	...
10112	51%	6%	7%	...	1%	...	0%	...
10119	51%	7%	6%	...	1%	...	0%	...
10121	52%	7%	7%	...	4%	...	1%	...
...

Methods > HCA

» Hierarchical cluster tree

- Euclidean distance;
- Ward's minimum variance.

» Optimal number of clusters

- Minimization criteria (McClain, SD index);
- 'Index > 1' criteria (Frey);
- Maximization criteria (Point biserial, Silhouette);

[Flexible approach depending on branch of tree]

Methods > Significance

» Set significance thresholds for each category

- 3 negative levels ($< P_{10}$, ‘-’; $< P_{05}$, ‘--’; $< P_{01}$, ‘---’);
- 3 positive levels ($> P_{90}$, ‘+’; $< P_{95}$, ‘++’; $< P_{99}$, ‘+++’).

» Assess significance of clusters for each category

- Average value within parishes from each cluster.

» Select important clusters

- Significance of each category;
- Geospatial location of parishes.

Recommendation

- » Oversampling priority:
- B and D (164 in 3092);
 - **B, D and F (180 in 3092);**
 - B, C, D and F (206 in 3092);
 - B, C, D, E and F (224 in 3092);
 - A, B, C, D, E and F (494 in 3092).

Conclusion

- Devised strategy to use **population census data** to assist in efficient targeting of **marginal population** and **ethnic minorities**;
- Considered **3092 parishes** using **25 socio-demographic variables**;
- Used **hierarchical clustering** and **geospatial analysis**;
- Selected 6 potentially important clusters (**494 parishes**);
- Recommend prioritize the use of 3 clusters (**180 parishes**).

Thank You

Motivation

» European Union (EU)

- “A Union of Equality: EU Anti-Racism Action Plan 2020–2025”;
- Assess impact of discrimination by collecting racial and ethnic data.

» Portugal

- “National Plan to Combat Racism and Discrimination 2021-2025”;
- Parliamentary Resolution no. 11/2021 and 16/2021;
- Combat racism and ethnic discrimination in Portugal.

Methods > explore data

» Main variables [at parish-level]

- Sex-ratio (1 categories);
- Literacy (1 category);
- Education (2 categories);
- Place-of-birth (11 categories);
- Religion (10 categories)

» Methods

- Calculate summary statistics: n , \hat{m} , sd , P_{50} , P_{25} , P_{75} ;
- Create geospatial maps.
