

11 March, 2011

Quarterly National Accounts and Annual Preliminary Accounts (Base 2006)

4th Quarter 2010 and Year 2010

Gross Domestic Product increased 1.4% in real terms in the year 2010 and 1.2% in the 4th quarter 2010

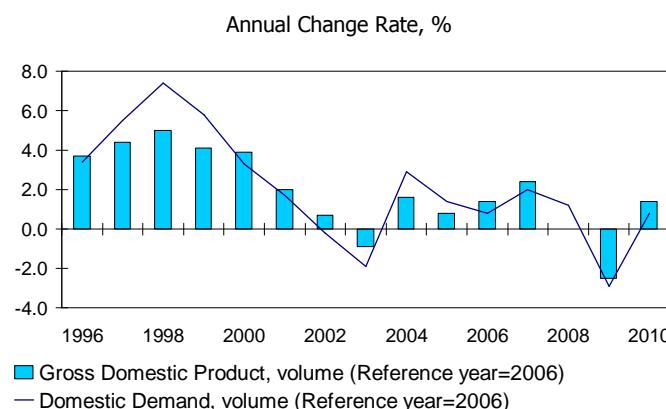

In 2010, Gross Domestic Product (GDP) was up by 1.4% in volume, comparing with a change rate of -2.5% in the previous year. This behaviour was mainly due to the contribution of domestic demand to GDP change rate (shifting from -3.2 p.p. in 2009 to 0.9 p.p. in 2010), led by an increase of Final Consumption Expenditure of Resident Households and a less intense reduction of Investment. The contribution of net external demand was also positive (0.5 p.p., compared with 0.7 p.p. in 2009), with Exports of Goods and Services accelerating more intensely compared with Imports of Goods and Services.

In the 4th quarter 2010, GDP increased 1.2%, in real terms, compared with the same period of 2009 (change rate of 1.4% in the previous quarter). The contribution of domestic demand to GDP year on year change rate was positive in the 4th quarter 2010. Investment decreased less intensely, while Final Consumption Expenditure of Resident Households decelerated. The contribution of net external demand remained positive, with Exports of Goods and Services registering a strong growth in the 4th quarter 2010. Compared with the 3rd quarter 2010, Portuguese GDP decreased 0.3%.

GDP was up by 1.4% in 2010

Portuguese GDP increased, in real terms, 1.4% in volume in 2010 (-2.5% in the previous year). The contribution of domestic demand to volume GDP change rate was positive (0.9 p.p.), after registering a strong negative contribution in 2009 (-3.2 p.p.). Net external demand maintained a positive contribution (0.5 p.p.), although slightly less than in the previous year (0.7 p.p.), with both external trade flows presenting strong growth rates.

Gross Domestic Product and Domestic Demand

Exports of Goods and Services increased 8.7% in volume in 2010 (-11.6% in 2009), while Imports of Goods and Services registered a change rate of 5.3% (-10.6% in the previous year).

Net borrowing of total economy stood at -8.4% of GDP in 2010, a less negative value than recorded in the previous year (-9.8%).

of -0.5% in the previous quarter. This evolution was mainly due to the acceleration of the Final Consumption Expenditure of General Government (0.1% and 4.6% in the 3rd and 4th quarter 2010, respectively), which was mainly associated to the acquisition of military equipment, although having a virtually null impact on GDP.

The positive evolution of domestic demand was also driven by the less intense reduction of Investment, although in a lesser extent (-8.2% and -5.5% in the 3rd and 4th quarter, respectively).

The contribution of net external demand to GDP year on year change rate was 0.7 p.p. in the 4th quarter 2010 (2.0 p.p. in the previous quarter), reflecting mainly the acceleration of Imports of Goods and Services, in consequence of the military equipment already mentioned. Exports of Goods and Services increased by 8.1% in volume in the 4th quarter (less 0.5 p.p. than in the previous quarter), while Imports of Goods and Services increased by 1.6% and 4.5% in the 3rd and 4th quarter, respectively.

Decomposition of GDP change rate (volume)

	Annual change rate (%)				
	2006	2007	2008	2009	2010
Domestic Demand	0.8	2.0	1.2	-2.9	0.8
Exports	11.6	7.6	-0.3	-11.6	8.7
Imports	7.2	5.5	2.8	-10.6	5.3
GDP	1.4	2.4	0.0	-2.5	1.4

	Contributes to GDP change rate

Domestic Demand	0.9	2.2	1.3	-3.2	0.9
Ext. Dem. Balance¹	0.6	0.2	-1.2	0.7	0.5
GDP	1.4	2.4	0.0	-2.5	1.4

¹ - External Demand Balance (Exports less Imports)

- Differences may occur due to non-additivity of chain-linked volume data and rounding procedures.

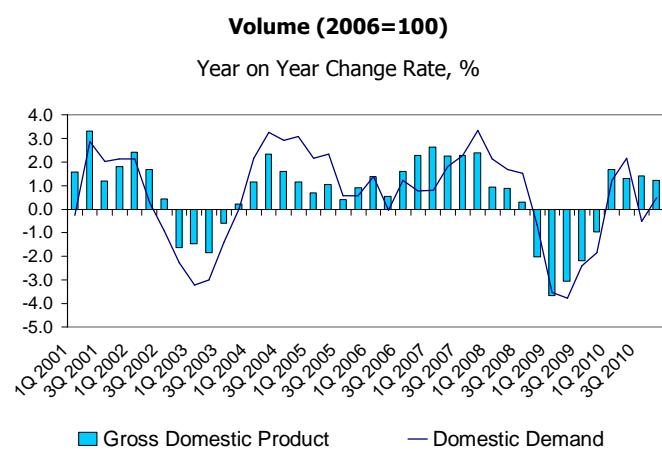

GDP up by 1.2% in volume in the 4th quarter 2010

Portuguese GDP increased, in real terms, 1.2% in the 4th quarter 2010 compared with the same quarter of the previous year (1.4% in the previous quarter).

The contribution of domestic demand for the GDP year on year change rate in the 4th quarter was positive (0.5 p.p.). Investment decreased less intensely, while Final Consumption Expenditure of Resident Households decelerated. The contribution of net external demand remained positive (0.5 p.p.), with Exports of Goods and Services registering a strong growth rate in the 4th quarter.

Domestic demand increased by 0.5% in volume in the 4th quarter, comparing with a year on year change rate

Gross Domestic Product and Domestic Demand

Compared with the 3rd quarter 2010, the GDP change rate was -0.3% in volume (change rate of 0.3% in the previous quarter).

Decomposition of GDP change rate (volume)

Flash - Flash Estimate (45 days); QNA - Quarterly National Accounts (70 days)

Methodological notes:

Comparing with the Flash Estimates and with the previous quarters releases, the current Quarterly National Accounts incorporate new information, leading to revisions in some aggregates, namely coming from:

- The latest version for the short-term statistics (retail trade turnover, industry turnover, industrial production, prices in industrial production and services turnover);
- The latest version for the Balance of Payments (January-December 2010), with revisions since January 2009 particularly in primary incomes (receivable and payable), and the Monetary and Financial Statistics from Banco de Portugal;
- Information from Quarterly Business Survey;
- The revision of external trade deflators (goods) for the 3rd quarter 2010, due to the integration of complete information for the 3 months of the quarter. Note that in the first (regular) estimate of Quarterly National Accounts for that quarter those deflators only included information for the first two months of the quarter;
- The January 2011 preliminary version for external trade of goods. The deflators for external trade of goods were calculated using data for October and November. It should be noticed that this information was not available when the flash estimates were compiled.

GDP quarterly aggregates for demand and production approaches are estimated using seasonally adjusted quarterly indicators. The seasonal adjustment procedure used is indirect, i.e. seasonally adjusted GDP is the sum of its seasonally adjusted components. This procedure is based in probabilistic models estimated with the software X-12 Arima. Consequently, the estimated values are subject to changes as new observations become available.

The exception to this procedure of seasonal adjustment is the series on capital transfers received from the Rest of the World. This series, due to its high volatility, is not seasonally adjusted.

These estimates were calculated using information available until 9th March 2011.
