## Income and Living Conditions 2006

---

### **18% of resident population in risk of poverty**

Statistics Portugal presents the main indicators concerning resident population at risk of poverty and inequality in monetary income distribution, estimates based upon the EU-SILC 2006 survey (EU Statistics on Income and Living Conditions).

In accordance with the 2006 survey, the at risk of poverty rate for residents was 18%, declining from 20% estimated for 2004 and 19% for 2005.

The income distribution was characterised by an evident inequality: the 20% top income group had 6,8 times more income than the bottom 20% (6,9 times, both in 2004 and 2005).

Similarly to 2005, the impact of social transfers (excluding pensions) in the decrease of the at risk of poverty in 2006 accounts for 7 percentage points.
