

MONTHLY ECONOMIC SURVEY

September 2012

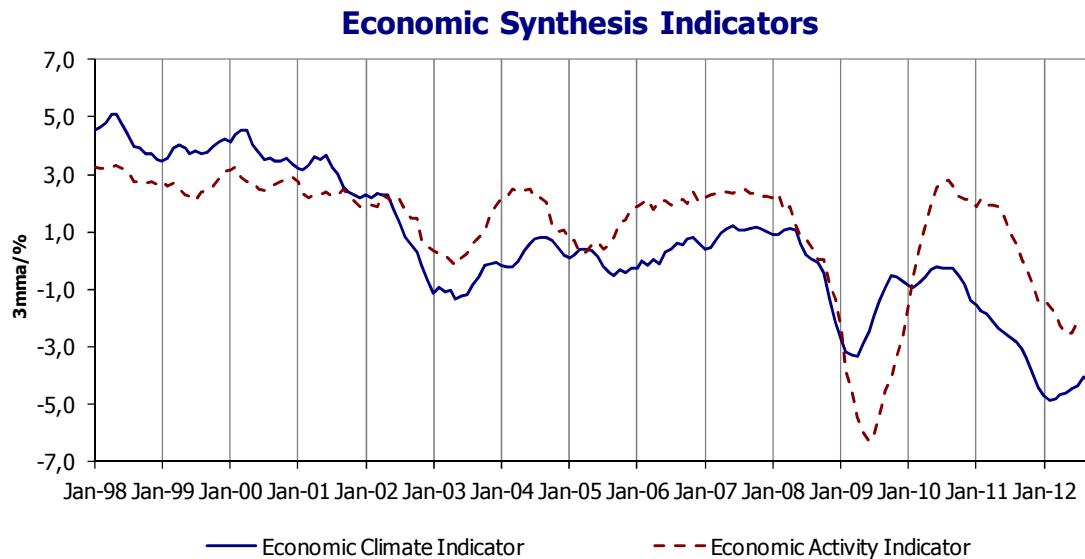

Private consumption diminished more intensely and investment attenuated the reduction in August.

In September, the economic sentiment and the consumer confidence indicators decreased again in the Euro Area (EA). In the same month, the raw materials and oil prices presented monthly change rates of 1.8% and -4.0% (0.1% and 9.5% in August), respectively.

In Portugal, the economic climate indicator diminished in September, opposing the tenuous upward movement started in March. The economic activity indicator, available until August, decreased more significantly after recording less intense reductions in June and July. The private consumption indicator presented a more pronounced year-on-year reduction in August, reflecting the stronger negative contribution of both components, current and durable consumption. In the same month, the Gross Fixed Capital Formation (GFCF) indicator recorded a slightly less intense year-on-year decrease, due to similar movements of the construction and the machinery and equipment components. Concerning the international trade of goods, exports and imports in nominal terms registered year-on-year change rates of 10.4% and -1.5% in August (8.9% and -6.2% in the previous month), respectively.

In August, the labour market indicators continued to reveal a reduction of both employment and the average monthly wage per worker.

The year-on-year change rate of the Consumer Price Index (CPI) shifted from 3.1% in August to 2.9% in September. Excluding energy and unprocessed food products, the CPI registered a year-on-year growth rate of 1.1% in September (1.4% in August). The differential between the year-on-year change rates of the Portuguese and the EA Harmonized Index of Consumer Prices (HICP) was 0.2 p.p., 0.4 p.p. less than in the previous month.

Based on information available up to October 17, 2012.

NOTES

With exception of situations duly identified, the values presented in tables and graphs and others that also serve for the analysis are, in the case of quantitative series, year-on-year rates of change (y.r.) under three-month moving average (3-mma) or, in the case of qualitative series, 3-mma of seasonally adjusted values (s.a.) or of effective values (e.v.). Annual information correspond to 12-mma, with the exception of variables presented as y.r. on stocks, where the annual value corresponds to the variation of the balance at the end of the year. Annualised variation (a.v.). Weight (w.).

Balances: differences between the percentage of respondents giving positive and negative replies.
