

17th September, 2014

MONTHLY ECONOMIC SURVEY

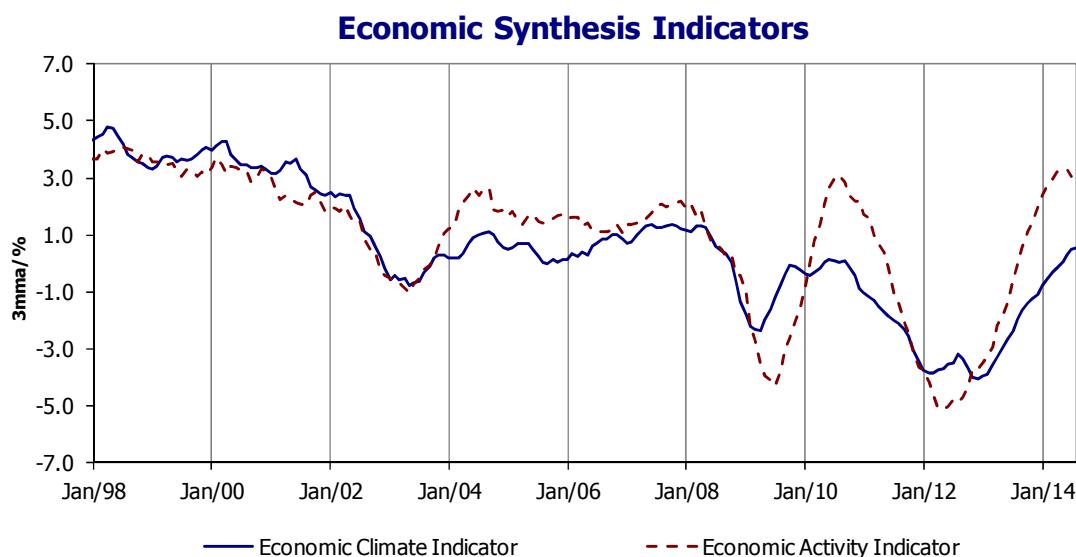

August 2014

Economic activity indicator decelerates and nominal exports and imports of goods increase in July. Economic climate indicator slightly recovers in August.

In August, the consumer confidence and the economic sentiment indicators for the EA diminished.

In Portugal, the economic activity indicator decelerated in July. The information from Short-Term Statistics revealed a less negative evolution in industry and construction and a stronger reduction in services. The economic climate indicator, already available for August, slightly recovered, attaining the highest value since July 2008. The private consumption indicator presented a more intense year-on-year growth rate in July, reflecting the increase of the positive contribution of the non-durable consumption component. In the same month, the Gross Fixed Capital Formation (GFCF) indicator decelerated tenuously, due to the lower positive contribution of the transport material and machinery and equipment components. Concerning the international trade of goods, exports and imports recorded year-on-year nominal change rates of 1.5% and 4.9% in July (-0.5% and 1.7% in the previous month), respectively. Without considering three months moving average, nominal exports and imports of goods shifted from 7.2% and 9.9% change rates in June to 1.3% and 3.0% in July, respectively.

The year-on-year change rate of the Consumer Price Index (CPI) was -0.4% in August (-0.9% in July). In the last month, the goods component registered a -1.6% change rate (2.1% in July) and the services component 1.4% (more 0.6 percentage points than in the previous month). The Harmonized Consumer Price Index (HCPI) was 0.4 percentage points lower than the estimate for the EA HICP in August (1.1 percentage points lower in July).

Based on information available up to September 16, 2014.

NOTES

With exception of situations duly identified, the values presented in tables and graphs and others that also serve for the analysis are, in the case of quantitative series, year-on-year rates of change (y.r.) under three-month moving average (3-mma) or, in the case of qualitative series, 3-mma of seasonally adjusted values (s.a.) or of effective values (e.v). Annual information correspond to 12-mma, with the exception of variables presented as y.r. on stocks, where the annual value corresponds to the variation of the balance at the end of the year. Annualised variation (a.v.). Weight (w.).

Balances: differences between the percentage of respondents giving positive and negative replies.
