

12 June 2017

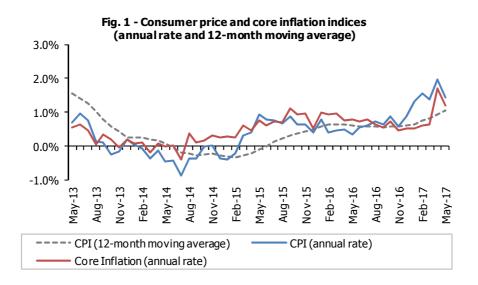

Consumer Prices Index May 2017

## CPI annual rate of change diminished to 1.5% in May

The CPI annual rate moved from 2.0% in April to 1.5% in May 2017. The annual core inflation rate, which excludes energy and unprocessed food products components, was 1.2% (1.7% in the previous month). The deceleration of the CPI was mainly determined by the behaviour of prices of *Transports*.

The CPI monthly rate was -0.2% (1.0% in the previous month and 0.3% in May 2016), while the CPI 12-month average rate was 1.0% (0.9% in the previous month).

In May 2017, the Portuguese Harmonised Index of Consumer Prices (HICP) annual rate of change was 1.7% (2.4% in the previous month), 0.3 percentage points (p.p.) above the rate estimated by Eurostat for the Euro area (in April, this difference was 0.5 p.p.).

In May 2017, the annual inflation rate measured by the CPI was 1.5%, 0.5 p.p. below the rate of the previous month (see Fig. 1).

The annual core inflation rate, which excludes energy and unprocessed food products components, was 1.2% (1.7% in the previous month). The unprocessed food aggregate recorded an annual rate of 3.1% in May (2.8% in April 2017) while energy presented an annual rate of 1.8% (3.5% in the previous month).

The largest downward pressures on the overall annual rate of change came from decreases in the prices of *Clothing* and footwear and *Furnishings, household equipment and routine maintenance of the house,* while upward pressures came from in the prices of *Restaurants and hotels* and *Food and non-alcoholic beverages.* 

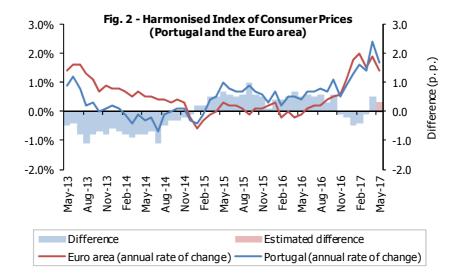

In May, the CPI monthly rate was -0.2% (1.0% in the previous month and 0.3% in May 2016). The main decrease was observed in the prices of *Transports*, partly influenced by a base effect as the Easter moving holiday occurred in April. On the opposite side, upward contributions were observed in the prices of *Food and non-alcoholic beverages*.

The CPI 12-month average rate was 1.0% in May (0.9% in the previous month).

In May, the HICP annual rate was 1.7% (2.4% in the previous month) while the HICP monthly rate was -0.3% (0.4% in May 2016).

In April 2017, the annual rate of change of the Portuguese HICP was 0.5 p.p. above than the annual rate of change for the Euro area. That difference is estimated to have decreased to 0.3 p.p. in May 2017.

The HICP 12-month average rate was 1.1% in May (1.0% in April 2017).

# **Housing Rents**

In May the monthly rate of change of the average value of rents per square meter of living area for the whole country was -0.1% (the same value as in the previous month).

The main increase was recorded in the *Centro* region (0.2%), while the *Açores* region recorded the lowest rate of change (-0.3%).

The annual change rate for the whole country was 0.9% in May. The main increase was observed in the *Madeira* region (3.2%), while the *Norte* region recorded the main decrease (-0.4%).

#### **Consumer Price Index**

The Consumer Price Index (CPI) measures the change over time of the prices of a certain basket of goods and services bought by a "typical" consumer. The CPI has been designed to capture price changes and not to measure price levels.

The CPI is updated every year with the most recent information on prices and quantities. The 2017 CPI weighting structure and the sample of goods and services included in the basket are a result of the combination of three fundamental sources of information: results of the Portuguese National Accounts complemented with the Household Budget Survey and the Census for more detailed levels of expenditure. Administrative data is also used.

The CPI is compiled through the aggregation of seven regional price indexes and the goods and services included in the index are grouped according to the COICOP classification.

#### **Table 1: CPI - COICOP Divisions**

01	Food and non-alcoholic beverages	07	Transports
02	Alcoholic beverages and tobacco	80	Communications
03	Clothing and footwear	09	Recreation and culture
04	Housing, water, electricity, gas and other fuels	10	Education
05	Furnishings, household equipment and routine maintenance of the house	11	Restaurants and hotels
06	Health	12	Miscellaneous goods and services

<sup>&</sup>lt;sup>1</sup>COICOP: Classification Of Individual Consumption by Purpose

## Monthly rate

The monthly rate is the change in the index of a certain month compared with the index of the previous month expressed as a percentage. Although up-to-date, this measure can be affected by seasonal and other effects.

#### **Annual rate**

The annual rate is the change in the index of a certain month compared with the index of the same month in the previous year expressed as a percentage. In the presence of a stable seasonal pattern, seasonal effects do not influence this measure.

#### 12-month average rate

The 12-month average rate is the change in the average index of one year compared with the average index of the previous year expressed as a percentage. This moving average is less sensitive to transient changes in prices.

# Core inflation index (all items CPI excluding unprocessed food and energy products)

The core inflation index is compiled by excluding the prices of unprocessed food and energy products from the all items CPI. The primary objective of this index is to capture the underlying inflation pressures in the economy.

### **Harmonised Index of Consumer Prices**

The Harmonised Index of Consumer Prices (HICP) is compiled in each member state of the European Union for the purposes of inflation comparisons across EU countries, as required by the Treaty on European Union<sup>1</sup>. This index plays an important role as a guideline for the achievement of the European System of Central Banks primary objective: price stability. In 1998, the European Central Bank adopted the HICP as "the most appropriate price measure" for its definition of price stability in the Euro area<sup>2</sup>.

Article 109j and protocol on the convergence criteria referred to in that article.

<sup>&</sup>lt;sup>2</sup> A stability oriented monetary policy strategy for the ESCB". ECB press notice released on 13 October 1998.

The HICP is produced in each Member State following a harmonized methodology developed by experts in the field of price statistics, under the "Price Statistics Working Group" and related Task Forces. From the methodological point of view, there are no major differences between the HICP and CPI. However, the different scope of coverage leads to differences in the weighting structure, mainly in Restaurants and hotels. This is mostly an effect of the inclusion of non-residents expenditure ("tourists") in the HICP and the corresponding exclusion from the CPI.

Additional information on the methodology of the HICP is available at <a href="http://ec.europa.eu/eurostat/web/hicp">http://ec.europa.eu/eurostat/web/hicp</a>.

Table 2: CPI and HICP 2017 weighting structure

COICOP divisions CPI

# Presentation of data and rounding rules

Since the release of the January 2013 CPI indices are published with base 100 in the year 2012.

Due to rounding procedures, those indices may not reproduce exactly the published rates of change. However, it should be noted that the published rates prevail.

In this press release the descriptive analysis is based on rounded values to one decimal.

### **Next press release**

The June 2017 CPI/HICP will be released on July 12<sup>th</sup>, 2017.

<sup>&</sup>lt;sup>2</sup> Due to rounding, the sum of the parts may not add exactly to 1000.
