Labour Cost Index

1st quarter of 2010

In the 1st quarter of 2010, the Labour Cost Index rose by 0.3 %, compared to the 1st quarter of 2009

In the 1st quarter of 2010, the Labour Cost Index (LCI) working day adjusted, excluding Public Administration, rose by 0.3% compared to the same period of the previous year (down from the 2.5% recorded in the 1st quarter of 2009).

In the 1st quarter of 2010, the Labour Cost Index (LCI)¹ working day adjusted, excluding Public Administration rose by 0.3%. This rate of change resulted from an increase in both the average labour costs (1.9%) and the number of hours actually worked (1.5%).

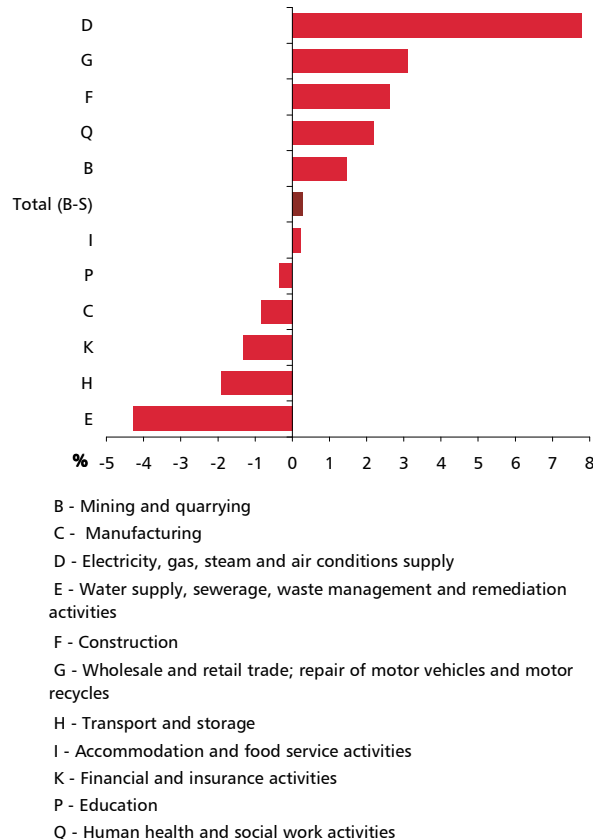

1. Economic activity

In the following activities, the LCI year-on-year rates of increase were larger than the global rate (0.3%): "Electricity, gas, steam and air conditions supply" (7.8%), "Wholesale and retail trade; repair of motor vehicles and motor cycles" (3.1%), "Construction" (2.6%), "Human health and social work activities" (2.2%), and "Mining and quarrying" (1.5%).

In turn, the LCI year-on-year rate of increase was smaller than the global rate in "Accommodation and food service activities" (0.2%).

Compared with the same quarter of the previous year, negative variations were registered in the following activities: "Education" (0.3%), "Manufacturing" (0.8%), "Financial and insurance activities" (1.3%), "Transport and storage" (1.9%), and "Water supply, sewerage, waste management and remediation activities" (4.3%).

Figure 1: LCI year-on-year rate of change by economic activity (Nace-Rev. 2)

In "Electricity, gas, steam and air conditions supply", the year-on-year rate of increase was explained by an increase in the average labour costs and by a decrease in the number of hours actually worked.

¹ The indices report to the reference year of 2008. The data exclude Public Administration and are adjusted for working days.

Table 1 - Year-on-year rate of change of average labour cost, hours actually worked by worker and LCI by economic activity (Nace-Rev.2)

Unit: %

Economic activity (Nace-Rev. 2)	Average labour cost by worker	Hours actually worked by worker	Labour Cost Index (LCI)
Total (B-S)	1,9	1,5	0,3
Of which:			
B - Mining and quarrying	1,5	0,0	1,5
C - Manufacturing	1,8	2,7	-0,8
D - Electricity, gas, steam and air conditions supply	2,1	-5,4	7,8
E - Water supply, sewerage, waste management and remediation activities	-1,6	2,9	-4,3
F - Construction	2,6	0,0	2,6
G - Wholesale and retail trade; repair of motor vehicles and motor recycles	3,1	0,0	3,1
H - Transport and storage	3,3	5,3	-1,9
I - Accommodation and food service activities	0,2	0,0	0,2
K - Financial and insurance activities	-1,3	0,0	-1,3
P - Education	2,8	3,1	-0,3
Q - Human health and social work activities	2,2	0,0	2,2

Source: INE, Labour Cost Index and Employment Statistics - 1st quarter of 2010.

In "Wholesale and retail trade; repair of motor vehicles and motor recycles", "Construction", "Human health and social work activities", "Mining and quarrying", and "Accommodation and food service", the LCI increase resulted only from an increase in average labour costs since the number of hours actually worked remained unchanged.

The decrease of the LCI in "Education", "Manufacturing", and "Transport and storage" was due to an increase in both the average labour cost and the number of hours worked, the latter being larger than the former.

The decrease of the LCI rate of change in "Water supply, sewerage, waste management and remediation activities", and "Financial and insurance activities" was justified, in the first one, by a decrease in average labour costs and an increase in the number of hours worked and, in the second one, only by a decrease in average labour costs.

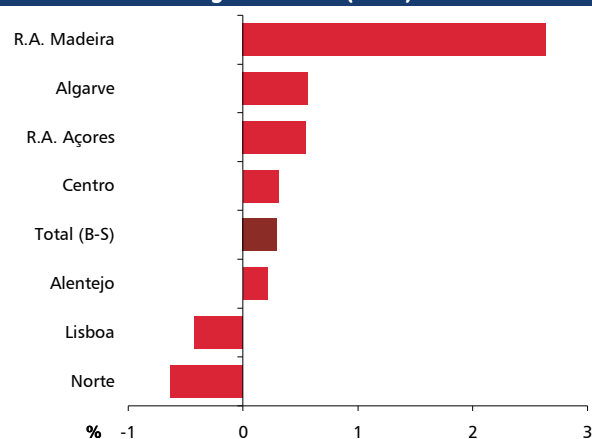

2. Regions NUTS II

In the 1st quarter of 2010, *Região Autónoma da Madeira* (2.6%), *Algarve* (0.6%), and *Região Autónoma dos Açores* (0.5%) registered LCI year-on-year rates of increase larger than the overall average (0.3%). *Alentejo* (0.2%) recorded smaller LCI increases than the overall.

Centro (0.3%) presented the same increase as the LCI.

In *Lisboa* (0.4%), and *Norte* (0.6%), the LCI presented year-on-year decreases.

Figure 2: LCI year-on-year rate of change by region NUTS II (2002)

In *Região Autónoma da Madeira*, *Região Autónoma dos Açores*, *Algarve*, *Centro*, and *Alentejo*, the increase of the LCI rate of change was generated by an increase in both the average labour costs and the number of hours actually worked, the former being larger than the latter.

Inversely, the LCI year-on-year decrease in *Norte* and *Lisboa* was justified by an increase in both the average labour costs and the number of hours actually worked, the latter being larger than the former.

Table 2 - Year-on-year rate of change of average labour cost, hours actually worked by worker and LCI by region NUTS II (2002)

Unit: %

NUTS II (2002)	Average labour cost by worker	Hours actually worked by worker	Labour Cost Index (LCI)
Total (B-S)	1,9	1,5	0,3
Norte	0,7	1,6	-0,6
Centro	1,5	1,0	0,3
Lisboa	2,3	2,5	-0,4
Alentejo	1,6	1,5	0,2
Algarve	0,6	0,1	0,6
R.A. Açores	1,6	1,0	0,5
R.A. Madeira	2,6	0,3	2,6

Source: INE, Labour Cost Index and Employment Statistics - 1st quarter of 2010.

3. Occupational groups

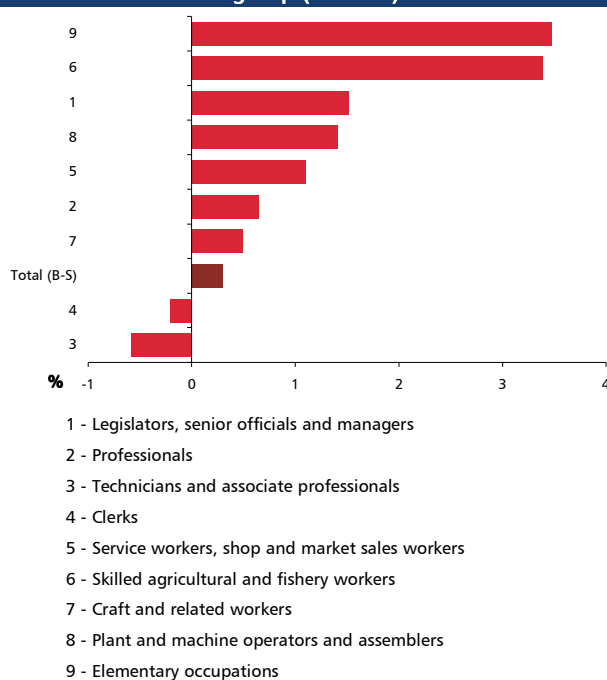

In the 1st quarter of 2010, in the following professional groups, the LCI year-on-year rates of increase were larger than the overall rate (0.3%): "Elementary occupations" (3.5%), "Skilled agricultural and fishery workers" (3.4%), "Legislators, senior officials and managers" (1.5%), "Plant and machine operators and assemblers" (1.4%), "Service workers, shop and market sales workers" (1.1%), "Professionals" (0.6%), and "Craft and related workers" (0.5%).

The LCI presented year-on-year decreases in "Clerks" (0.2%), and "Technicians and associate professionals" (0.6%).

The LCI year-on-year rate of increase for the professional groups "Elementary occupations", "Skilled agricultural and fishery workers", and "Legislators, senior officials and managers" was explained by an increase in the average labour costs and by a decrease in the number of hours actually worked.

In "Professionals", "Service workers, shop and market sales workers", "Craft and related workers", and "Plant and machine operators and assemblers", the LCI year-on-year rate of increase was due to an increase in the average labour costs and an increase in the number of hours actually worked, the former being larger than the latter.

Figure 3: LCI year-on-year rate of change by occupational group (ISCO-88)

Inversely, the year-on-year decrease in "Clerks" was explained by an increase in both the average labour costs and the number of hours actually worked, the latter being larger than the former.

The rate of change in "Technicians and associate professionals" was due to a decrease in both the average labour cost and the number of hours worked, the former being larger than the latter.

Table 3 - Year-on-year rate of change of average labour cost, hours actually worked by worker and LCI by occupational group (ISCO-88)

Occupational groups (ISCO-88)	Average labour cost by worker	Hours actually worked by worker	Unit: %
			Labour Cost Index (LCI)
Total (B-5)	1,9	1,5	0,3
Legislators, senior officials and managers	1,1	-0,2	1,5
Professionals	2,6	2,2	0,6
Technicians and associate professionals	-0,2	-0,1	-0,6
Clerks	2,4	2,7	-0,2
Service workers, shop and market sales workers	1,4	0,6	1,1
Skilled agricultural and fishery workers	3,0	-0,3	3,4
Craft and related workers	1,8	1,6	0,5
Plant and machine operators and assemblers	2,1	1,0	1,4
Elementary occupations	3,1	-0,4	3,5

Source: INE, Labour Cost Index and Employment Statistics - 1st quarter of 2010.

4. International comparison

Figure 4 presents the year-on-year rates of change of the LCI, by country, for the last quarter available (4th quarter of 2009)² for the whole economy (B to N), published by Eurostat under the title "LCI – Labour Cost Index", in the 17th March of 2010.

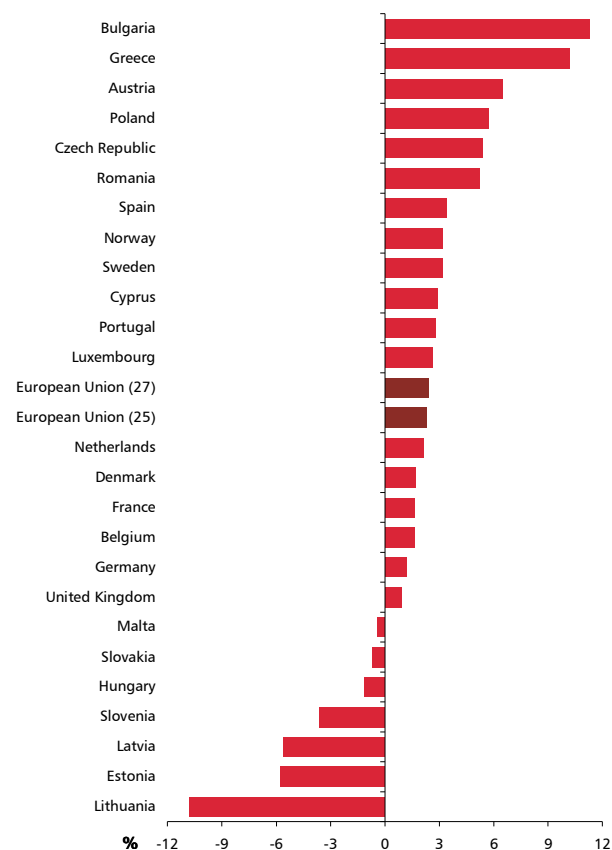

In the 4th quarter of 2009, the LCI year-on-year rate of change for the European Union (27 countries) was 2.4%. In Portugal, the rate was 2.8%.

Bulgaria and Greece showed increases that were larger, at least four times, than the registered for the European Union, of 11.3% and 10.2%, respectively.

Concerning the increases that were smaller than the European Union's, those of Germany (1.2%), France, and United Kingdom (0.9%) stand out.

Lithuania, Estonia, Latvia, and Slovenia presented decreases in the LCI, of 10.8%, 5.8%, 5.6% and 3.6%, respectively.

Figure 4: LCI year-on-year rate of change (B-N) in European Union countries (27)

² Provisional data for United Kingdom, Portugal, Sweden, Malta, Cyprus, Spain, Belgium, Netherlands, Latvia, Slovenia, Hungary, Romania, Austria, Norway and Bulgaria.

Note: The series are non-adjusted data.

TECHNICAL NOTE

In order to be in line with the series published by Eurostat, which has change the reference year of Labour Cost Index (LCI) from 2000 to 2008, the indices that became available, from the 2nd quarter 2009, consider the year 2008 as the reference year. Series were rebased for the reference year 2008, since the 1st quarter of 2000. These new series are not comparable with the previous ones (1995 series).

A new statistical classification for economic activities (NACE Rev. 2) was established by the Regulation N° 1893/2006 of December 20th and states that it ought to be used by statistics related to economic activities performed from January 2008 onwards. The adoption and transposition for the Portuguese classifications led to "Classificação Portuguesa das Actividades Económicas Revisão 3" (CAE-Rev. 3). In the LCI case, the regulation entered into force in January 2009, covering data already published for the period 2000-2008 and for the first quarter 2009 onwards. To obtain data classified by CAE-Rev. 3, it was necessary to reclassify and recalculate data from several sources that allowed the computation of the LCI (such as Labour Cost Index, Lists of Personnel, Labour Cost Survey and Labour Force Survey). The LCI data between 2000 and 2008 were reprocessed and should be considered as preliminary.

In this press release, the series are working day adjusted (WDA), as released by Eurostat, and unadjusted series (NSA, Non-Adjusted Data), by economic activity (NACE-Rev. 2), by region NUTS II (2002) and by occupational group (ISCO-88). The data exclude the following activities: "Public administration and defence; compulsory social security" (O); and the public part of the following activities: "Education" (P) and "Human health and social work activities" (Q).

The LCI is an indicator that measures the development of the average labour cost per worked hour (hourly labour costs).

The changes in the employment, hours actually worked and prices levels affect the indices obtained during the observed periods.

Formula for the calculation of the LCI:

$$LCItj(k) = \frac{\sum_{i=B}^S w_i^{tj} h_i^{tk}}{\sum_{i=B}^S w_i^{tk} h_i^{tk}}$$

$LCItj(k)$ = Labour Cost Index, quarter t , year j (related to the base period quarter t , year k)

$i = \{B, S\}$ = Sector of economic activity

tj = quarter t of year j under observation

tk = quarter t of year k , base period (2000)

w_i^{tj} = Labour cost of employees by hour worked in sector i in quarter t in year j

h_i^{tk} = Hours actually worked in sector i in quarter t in year k

$w_i^{tj} * h_i^{tk}$ = Total labour cost in sector i in quarter t in year j ; the hours were evaluated in quarter t in year k

$w_i^{tk} * h_i^{tk}$ = Total labour cost in sector i in quarter t in year k (base)

The actual labour cost adopts the perspective of the employer, corresponding to the total cost incurred by the employer and including the following items:

- ✓ Basic wage and salaries
- ✓ Regular bonuses and allowances (paid in each pay period)
- ✓ Irregular bonuses and allowances (not paid in each pay period)
- ✓ Overtime payment
- ✓ Payments and benefits in kind
- ✓ Payment for hours not worked
- ✓ Employer's social contributions
- ✓ Collectively agreed, contractual and voluntary social security contributions
- ✓ Other (including payments to employees leaving the enterprise)

Year-on-year rate of change: the year-on-year change compares the level of the variable in the current quarter with that of the corresponding quarter of the previous year. This rate of change, considering a seasonal stable pattern is not affected by this type of fluctuation, but may, however, be influenced by specific effects in a given quarter.

DATE SCHEDULED FOR THE NEXT PRESS RELEASE

August, 13th 2010.
