AGRICULTURAL CENSUS 2009

17 MAY 2011

Agricultural Census 2009 – Final results

Six months after the conclusion of data collection of the Agricultural Census 2009 (RA 09) and following the press release of preliminary data at 15 December 2010, Statistics Portugal (INE) made available, in electronic format and on paper, a publication with the analysis of results.

This edition is part of the plan for the dissemination of RA 09 and appeals, whenever it seems appropriate, to the comparison with previous census operation (1999) and to the characterization of regional and local data. Simultaneously, in the official statistics portal, will be available a wide range of indicators that reflects the structure of agricultural holdings at different geographical levels.
