11 May, 2012

CONSUMER PRICE INDEX April 2012

Consumer Prices up 3.0% in April on a year earlier

The CPI recorded an annual rate of change of 3.0% in April 2012. Excluding energy and unprocessed food, the annual rate was 1.7%. On a monthly basis, the CPI decreased to 0.3% (1.2% in March and 0.4% in April 2011). The CPI 12-month average rate decreased 0.1 percentage points (p.p.) to 3.5% in April.

In April 2012, the Portuguese Harmonised Index of Consumer Prices (HICP) annual inflation rate decreased to 2.9%, 0.3 p.p. above the rate estimated by Eurostat for the Euro area.

In April 2012, the annual inflation rate measured by the CPI decreased 0.1 p.p. to 3.0% (see figure 1).

The largest upward pressure on the overall annual change rate came from increases in the prices of Housing, water, electricity, gas and other fuels and Transports. The prices of Clothing and footwear led to an opposite effect.

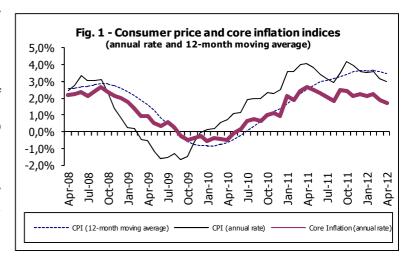

The annual core inflation rate, which excludes energy and unprocessed food products, decreased by 0.2 p.p., to 1.7%.

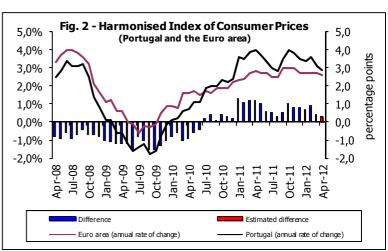

In April, the CPI monthly rate was 0.3% (1.2% in March 2012 and 0.4% in April 2011). The main upward contribution to this result came from changes in the prices of Alcoholic beverages and tobacco.

In April 2012, the HICP annual rate decreased to 2.9% (3.1% in March 2012). On a monthly basis, the HICP rose 0.3% (1.2% and 0.6% respectively in the previous month and in April 2011). The HICP 12-month average rate was 3.4% (3.5% in March 2012). In March 2012 the gap between the Portuguese and the Euro area annual change rate was 0.4 p.p. and it is estimated to have decreased to 0.3 p.p. in April 2012 (see figure 2).

With this press release it is also published a new monthly series of CPI since 1977, coherent with the current series and including a large set of sub-indices, providing detailed information on consumer prices behaviour for that period.

www.ine.pt

The May 2012 CPI/HICP will be released on June 12th 2012

Consumer Price Index

The Consumer Price Index (CPI) is an indicator showing how the prices of a certain basket of goods and services bought by a "typical" consumer change over time. The CPI has been designed to capture price changes and not to measure price levels. Both the consumption pattern and the goods and services included in the CPI basket were derived from the year 2005/2006 Household Budget Survey and are updated annually with the most recent information on prices and quantities, if available. The CPI is compiled through the aggregation of seven regional price indexes and the goods and services included in the index are grouped according to the COICOP¹ classification.

Table 1: CPI/COICOP Index Divisions

01	Food and non-alcoholic beverages	07	Transports
02	Alcoholic beverages and tobacco	08	Communications
03	Clothing and footwear	09	Recreation and culture
04	Housing, water, electricity, gas and other fuels	10	Education
05	Furnishings, household equipment and routine maintenance of	11	Restaurants and hotels
	the house		
06	Health	12	Miscellaneous goods and services

Monthly rate

The monthly rate is the change in the index of a certain month compared with the index of the previous month expressed as a percentage. Although up-to-date, this measure can be affected by seasonal and other effects.

Annual rate

The annual rate is the change in the index of a certain month compared with the index of the same month in the previous year expressed as a percentage. In the presence of a stable seasonal pattern, seasonal effects do not influence this measure.

12-month average rate

The 12-month average rate is the change in the average index of one year compared with the average index of the previous year expressed as a percentage. This moving average is less sensitive to transient changes in prices.

Core inflation index (all items CPI excluding unprocessed food and energy products)

The core inflation index is compiled by excluding the prices of unprocessed food and energy products from the allitems CPI. The primary objective of this index is to capture the underlying inflation pressures in the economy.

Harmonised Index of Consumer Prices

The Harmonised Index of Consumer Prices (HICP) is compiled in each member state of the European Union for the purposes of inflation comparisons across EU countries, as required by the Treaty on European Union². This index plays an important role as a guideline for the achievement of the European System of Central Banks primary objective: price stability. In 1998, the European Central Bank adopted the HICP as "the most appropriate price measure" for its definition of price stability in the Euro area³.

More information is available at http://epp.eurostat.ec.europa.eu/portal/page/portal/hicp/introduction.

Rounding rules

Another relevant change in January 2011 is that the published values for the Portuguese CPI have more decimal places. The indices are rounded to three decimal places, and the rates of change are rounded to two decimal places. In practice, this change only affects the visible values, since all other calculations are performed using more precision and the values are rounded as a final step before publication. In this press release the descriptive analysis is based on rounded values to one decimal.
