

MONTHLY ECONOMIC SURVEY
February 2013

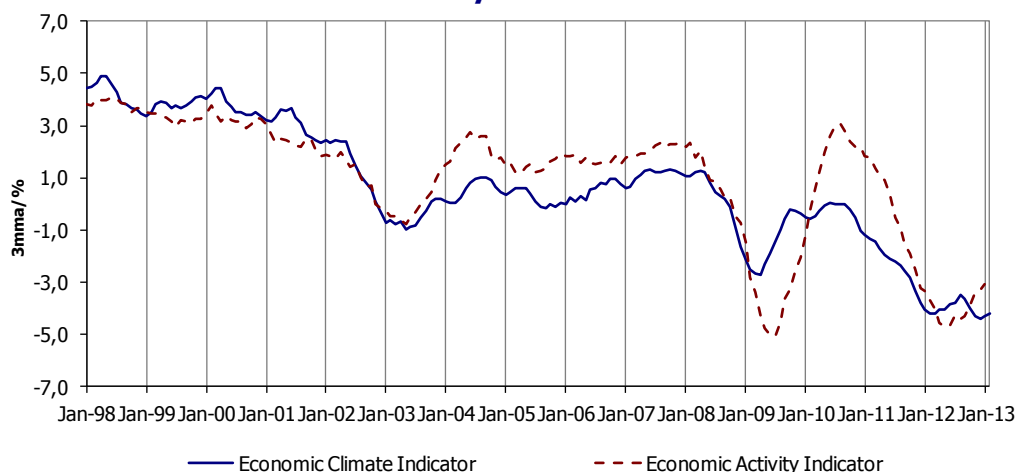

Investment diminishes more intensely and nominal exports increase in January

In February, the economic sentiment and the consumer confidence indicators for the Euro Area (EA) recorded a new recover. In the same month, the raw materials and oil prices presented monthly change rates of 0.1% and 2.2% (-0.9% and 1.9% in January), respectively.

In Portugal, the economic climate indicator slightly recovered in January and February, although remaining close to the lowest value of the series observed in December. The economic activity indicator, available until January, registered a less intense decrease in the last five months. The private consumption indicator presented a slightly more pronounced year-on-year reduction in January, reflecting the stronger negative contribution of the non-durable consumption component. The Gross Fixed Capital Formation (GFCF) indicator recorded a slightly stronger decrease in January, attaining the minimum of the series, which reflected the negative evolution of the construction component. Concerning the international trade of goods, in nominal terms, exports and imports registered year-on-year change rates of 1.0% and -6.4% in January (1.1% and -2.3% in the previous month), respectively. Without using three-month moving averages, the nominal exports of goods shifted from a year-on-year change rate of -2.9% in December to 5.6% in January.

The 12-month average rate of the Consumer Price Index (CPI) was 2.2% in February (2.5% in January). The 12-month average rate of the Harmonized Index of Consumer Prices (HICP) decreased to 2.3% in January (2.5% in the previous month). In February, the differential between the Portuguese HICP and the EA HICP was -0.1 p.p. (0.1 p.p. in January).

Economic Synthesis Indicators

Based on information available up to March 15, 2013.

NOTES

With exception of situations duly identified, the values presented in tables and graphs and others that also serve for the analysis are, in the case of quantitative series, year-on-year rates of change (y.r.) under three-month moving average (3-mma) or, in the case of qualitative series, 3-mma of seasonally adjusted values (s.a.) or of effective values (e.v). Annual information correspond to 12-mma, with the exception of variables presented as y.r. on stocks, where the annual value corresponds to the variation of the balance at the end of the year. Annualised variation (a.v.). Weight (w.).

Balances: differences between the percentage of respondents giving positive and negative replies.
