

17th July, 2013

MONTHLY ECONOMIC SURVEY

June 2013

Private consumption and investment diminish less intensely in May.

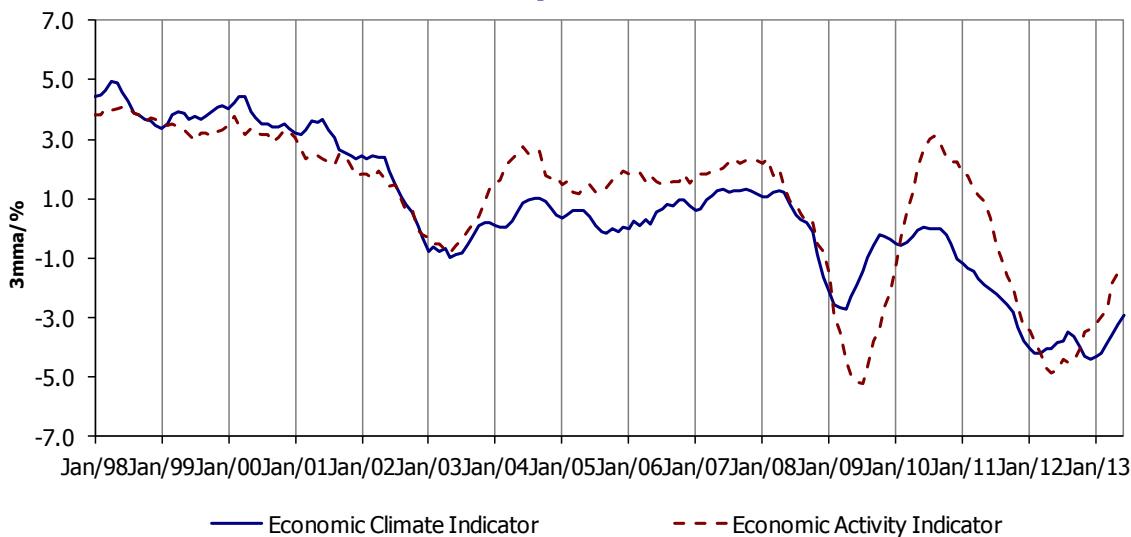

Nominal exports accelerate and imports register a less negative change rate.

In June, the economic sentiment and the consumer confidence indicators for the Euro Area (EA) recovered. In the same month, the raw materials and oil prices presented monthly change rates of -10.3% and -1.2% (1.0% and 0.6% in May), respectively.

In Portugal, the economic climate indicator maintained in June the upward movement observed since the beginning of the year, after attaining the minimum of the series in December. The economic activity indicator, available until May, registered a less intense decrease comparing with the previous month. The private consumption indicator presented a less pronounced year-on-year reduction in May, due to the lower negative contribution of the non-durable consumption component. The Gross Fixed Capital Formation (GFCF) recorded also a less intense year-on-year decrease, reflecting the less negative contributions of the construction and, to a lesser extent, the machinery and equipment components. Concerning the international trade of goods, in nominal terms, exports and imports registered year-on-year change rates of 5.7% and -1.6% in May (2.8% and -2.3% in the previous month), respectively.

The 12-month average rate of the Consumer Price Index (CPI) was 1.4% in June (1.6% in May). The 12-month average rate of the Harmonized Index of Consumer Prices (HICP) decreased to 1.6% (1.7% in the previous month). In June, the differential between the Portuguese HICP and the EA HICP was -0.4 p.p., the same as in April and May.

Economic Synthesis Indicators

Based on information available up to July 16, 2013.

NOTES

With exception of situations duly identified, the values presented in tables and graphs and others that also serve for the analysis are, in the case of quantitative series, year-on-year rates of change (y.r.) under three-month moving average (3-mma) or, in the case of qualitative series, 3-mma of seasonally adjusted values (s.a.) or of effective values (e.v). Annual information correspond to 12-mma, with the exception of variables presented as y.r. on stocks, where the annual value corresponds to the variation of the balance at the end of the year. Annualised variation (a.v.). Weight (w.).

Balances: differences between the percentage of respondents giving positive and negative replies.
