Corrected (march 17, 2015)

Labour Cost Index 4th quarter of 2014

On page 1
first column, point 1, first paragraph, corrected to: "a decrease of 8.8%"
second column, point 1, before figure 1, corrected to: "decreased by 5.8%"

The Labour Cost Index decreased by 8.8% from the same quarter in 2013

The Labour Cost Index working days adjusted decreased by 8.8% in the 4th quarter of 2014, compared with the same period in 2013. In the previous quarter, it was recorded an increase of 0.4%.

The two main labour cost items are wage costs and other costs (per hour actually worked). Wage costs decreased by 9.7% from the same period a year earlier and other costs increased by 5.8%.

1. Labour Cost Index and respective items

The Labour Cost Index (LCI) recorded a decrease of 8.8% in the 4th quarter of 2014.¹

LCI is a short-term indicator of the evolution of labour costs per hour actually worked (hourly labour cost) incurred by the employer. These costs include, in addition to wage costs, other labour costs incurred by the employer (see the technical note on pages 7 and 8).

From yet another viewpoint, as it is an index calculated from a ratio of two items, i.e. average cost per employee and number of hours actually worked per employee (hereinafter referred to as average labour costs and hours actually worked), its evolution is determined by changes in each of these items.

¹ The data analysed in this Press Release are working days adjusted. The raw data are available in the annex tables and at the Official Statistics Portal. Unless otherwise stated, the rates of change mentioned in this Press Release are year-on-year rates of change (from the same quarter of the previous year).

This press release analyses LCI series broken down into several items, according to the two mentioned viewpoints: 1) wage costs (per hour actually worked) *versus* other costs (non-wage costs, also per hour actually worked); 2) average labour costs *versus* hours actually worked.

Wage costs decreased by 9.7% and other costs decreased by 5.8% (Figure 1).

Figure 1: LCI year-on-year rate of change
(working days adjusted data)

The change in the LCI also resulted from the combined effect of a 6.7% decrease in the average labour costs and an increase in the number of hours actually worked, of 2.5% (Figure 2).

Figure 2: LCI year-on-year rate of change (working days adjusted data)

2. Sectors of economic activity

For the subgroup of economic activities from sections B to N² (which include, in general, the business economy or the private sector of the economy), the LCI decreased by 3.4%.

For the subgroup composed by the remaining economic activities covered by the LCI (sections O to S), which include mostly, but not exclusively, the non-business economy or the public sector of the economy, it was recorded a decrease of 16.5%.

For the Public Administration activities, the average labour costs decreased compared to the same period of the previous year, mostly because in the 4th quarter of 2013 the holiday bonuses had been paid (by the half of the amount for the workers earning from 600€ to

² The activities' designation is available in the annex tables.

1100€ and, by the total amount, for the workers earning more than 1100€), whereas the same did not occurred in the 4th quarter of 2014.

In activities from sections B to N:

- wage costs decreased by 3.6% and other costs decreased by 2.7% (Figure 3);
- the decrease in the LCI (of 3.4%) resulted also from a decrease in the average labour costs (0.5%) and an increase in the number of hours actually worked (3.1%) (Figure 4).

Figure 3: LCI year-on-year rate of change by economic activity (NACE-Rev. 2) in the 4th quarter of 2014 (working days adjusted data)

In activities from sections O to S:

- wage costs decreased by 19.2% and other costs decreased by 9.1%. This decrease was mostly due, as mentioned above, to the non-payment of holiday bonuses in 2014 (paid in the same quarter of the previous year).
- the decrease in the LCI (of 16.5%) resulted also from an decrease in the average labour costs (14.9%) and an increase in the number of hours actually worked (1.9%).

Among the activities from sections B to N, the LCI decreased by 4.6% in industry (sections B to E), 6.7% in construction (section F), and 2.0% in services (G to N).

Figure 4: LCI year-on-year rate of change by economic activity (NACE-Rev. 2) in the 4th quarter of 2014 (working days adjusted data)

In industry:

- wage costs decreased by 4.8% and other costs decreased by 3.7%;
- the decrease in the LCI (of 4.6%) resulted from a decrease in the average labour costs (0.6%) and an increase in the number of hours actually worked (4.1%).

In construction:

- wage costs decreased by 6.8% and other costs decreased by 6.0%;
- the decrease in the LCI (of 6.7%) resulted from a decrease in the average labour costs (1.6%) and an increase in the number of hours actually worked (5.4%).

In services:

- wage costs decreased by 2.1% and other costs decreased by 1.4%;
- the decrease in the LCI (of 2.0%) resulted from a decrease in the average labour costs (0.2%) and an increase in the number of hours actually worked (1.9%).

3. Comparison with the European Union

Figure 5 shows the rates of change of the LCI, by country, for the last quarter available (3rd quarter of 2014), as published by Eurostat in the 17th of December of 2014.

The LCI rate of change for the European Union (28 countries) was 1.4%, in the 3rd quarter of 2014.

In sixteen countries, the LCI rates of increase were larger than the European Union average, with Greece recording the largest one (7.1%).

In eight countries, the LCI rates of increase were smaller than the European Union average, whose values ranged from 0.3% (Spain) to 1.2% (United Kingdom).

Portugal³ recorded an increase of 0.5%.

Two countries recorded LCI decreases: Cyprus (2.8%), and Ireland (0.8%).

Figure 6 shows the developments in the LCI rates of change in Portugal and in the European Union, from the 1st quarter of 2009 to the 3rd quarter of 2014.

³ The rate of change for Portugal was now revised into 0.4% (as described in the technical note, page 8).

Its analysis shows that the LCI in Portugal recorded globally lower changes than those observed, on average, for the European Union (28 countries) since the 1st quarter of 2010. Those changes gave rise to almost successive decreases from the 1st quarter of 2011 to the 1st quarter of 2013 and increases from this period onwards (except for the 1st quarter of 2014).

Figure 5: LCI year-on-year rate of change by European Union Country (28) in the 3rd quarter of 2014 (working days adjusted data)

Figure 6: LCI year-on-year rate of change in the European Union (28) and in Portugal (working day adjusted data)

TECHNICAL NOTE

The Labour Cost Index (LCI) is a short-term indicator that measures quarterly developments in labour costs per hour actually worked (hourly average cost) incurred by the employer. The index is calculated by dividing the average cost per employee by the number of hours actually worked per employee. For this reason, the evolution of these two variables (labour costs and hours worked) contributed to explaining their developments.

Labour costs incurred by the employer include the following:

Wage costs:

- Base wage
- Regular bonuses and allowances
- Irregular bonuses and allowances (holiday bonus, Christmas bonus, end-of-year bonuses/distribution of profits, other irregular bonuses and allowances)
- Payment of overtime
- Payment in kind

Other costs:

- Severance payment
- Employers' legal costs (social security contributions, insurance against accidents and occupational disease)
- Collectively agreed, contractual and voluntary costs (supplementary pension/invalidity benefit, health insurance, life/personal accident insurance, and social benefits paid directly to employees in case of absence on account of sickness)

The LCI is a statistical operation held on a quarterly basis through a sampling survey. Data collection with local units is carried out through an electronic questionnaire (Computer Assisted Web Interviewing - CAWI). By economic activity, the LCI covers Sections B to S of CAE-Rev. 3.

Data on public administration [Sections O (Public administration and defence; compulsory social security) and the public part of Sections P (Education) and Q (Human health and social work activities)] are not obtained through direct collection. These data are estimated by Statistics Portugal from data obtained, among other sources, from the Directorate-General of Budget of the Ministry of Finance. These data are subject to revisions.

The LCI is Laspeyres index.

In order to obtain more information about the LCI calculation, we recommend the consultation of the methodological note for this statistical operation, which is available (in Portuguese) at <http://smi.ine.pt/DocumentacaoMetodologica/Detalhes/1064>.

Information selected for publication

This press release analyses changes in the total LCI and respective items: (1) wage costs versus other costs; and (2) average costs per employee versus number of hours actually worked per employee.

Given that the LCI is seasonal, data are presented as year-on-year rates of change, which compare index levels in the current quarter with those for the same quarter a year earlier. The series of index figures are available on the Official Statistics Website.

With the purpose of eliminating the effects resulting from different numbers of working days in the same quarters of different years (Easter and other movable feasts), the series analysed are adjusted for working days. Raw series, not adjusted for working day effects, are available in the annex tables and on the Official Statistics Portal.

(to be continued)

(continuation)

Revisions

The data published in this release concerning the last quarters are subject to revisions. These revisions result, on one side, from the inclusion of information for the last quarter sent lately by some establishments of the LCI sample and, on the other side, from updates in the data for the last quarters obtained from the Directorate-General of Budget.

The impact of those revisions, measured by the difference between the year-on-year rates of change published today and those published for the 3rd quarter of 2014 in the Press Release "Labour Cost Index – 3rd quarter of 2014", is available in the following table:

Revision of the LCI year-on-year rates of change published in the 3 rd quarter of 2014										
Economic activity (sections from Nace Rev. 2)	Total	Component of the index		Source of variation of the index		Total	Component of the index		Source of variation of the index	
		Wage costs	Other costs	Average cost per employee	Hours actually worked per employee		Wage costs	Other costs	Average cost per employee	Hours actually worked per employee
	Working days adjusted data					Non working days adjusted data
