# Monthly Employment and Unemployment Estimates September 2016

# The August 2016 definitive unemployment rate estimate was 10.9%

The definitive unemployment rate estimate for August 2016 was 10.9%, remaining unchanged from the previous month's level and having decreased by 0.3 percentage points (p.p.) from three months before. That estimate was revised downwards by 0.1 p.p. from the provisional estimate released one month ago (11.0%).

The definitive unemployed population estimate for August was 560.0 thousand people, remaining practically unchanged from the previous month's level.

The August 2016 definitive employed population estimate was 4,574.6 thousand people, 1.7 thousand more people than in the previous month (which corresponds to a nearly null relative change).

The provisional unemployment rate estimate for September 2016 was 10.8%. For this month, the provisional estimate for the unemployed population was 555.6 thousand people and for the employed population was 4,567.5 thousand people.

Note: (p) - Provisional estimates.

# **1.** Employed population and employment rate <sup>(1)</sup>

In August 2016, the definitive estimate for the employed population was 4,574.6 thousand people, having increased by 1.7 thousand people from the previous month's level (which corresponds to a nearly null relative change) and increased by 1.0% from three months before (44.5 thousand). This estimate was

revised upwards, from the provisional value released one month ago, by 0.3% (12.7 thousand).

In September 2016, the provisional estimate for the employed population was 4,567.5 thousand people, having decreased by 0.2% from the previous month's level (7.1 thousand) and increased by 0.4% from June 2016 definitive estimate (17.0 thousand).

Monthly Employment and Unemployment Estimates - September 2016

<sup>&</sup>lt;sup>(1)</sup> In the estimates published on this Press Release, obtained as described in the technical note (annex), it was considered the population aged 15 to 74 and the values were seasonally adjusted (unless otherwise stated).

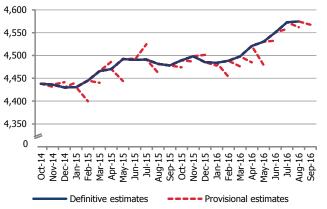

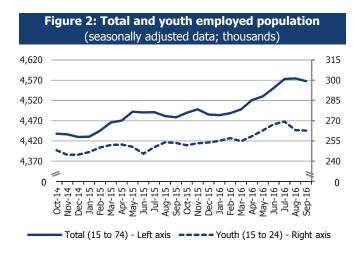

Figure 1: Employed population - definitive and provisional estimates

(seasonally adjusted data; thousands)

The employed population decreased for women (0.6%; 13.0 thousand) and for adults (25 to 74 years old) (0.2%; 6.8 thousand), remained practically unchanged for young people (15 to 24 years old) and increased for men (0.3%; 5.9 thousand).

The employment rate stood at 58.6%, remaining unchanged from the definitive previous month's level and increasing by 0.3 percentage points (p.p.) from three months before (June 2016).

The employment rate of men (62.9%) exceeded that of women (54.6%) by 8.3 p.p.. When comparing to the previous month's level, the former increased by 0.2 p.p. and the latter decreased by 0.3 p.p..

The employment rate of adults was 64.2%, down 0.1 p.p. from the previous month's level. The employment rate of young people was 24.0% and remained unchanged from the previous month.

# 2. Unemployed population and unemployment rate

In August 2016, the definitive estimate for the unemployed population was 560.0 thousand people, having remained practically unchanged from the previous month's level and decreased by 2.2% (12.3 thousand) from May 2016. That estimate was revised downwards, from the provisional value published one month ago, by 0.3% (1.8 thousand).

In September 2016, the provisional estimate for the unemployed population was 555.6 thousand people, less 0.8% (4.4 thousand) than the definitive previous month's level and less 1.7% (9.3 thousand) than the observed three months before.

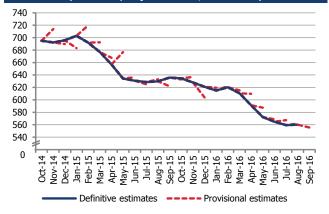

Figure 3: Unemployed population - definitive and provisional estimates

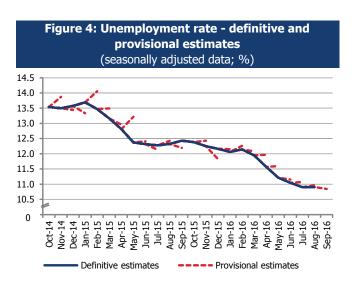

(seasonally adjusted data; thousands)

Still in September 2016, the unemployed population monthly decreased for men (2.3%; 6.4 thousand), adults (0.7%; 3.2 thousand) and young people (1.3%; 1.2 thousand). The unemployed population of women increased by 0.7% (2.0 thousand).

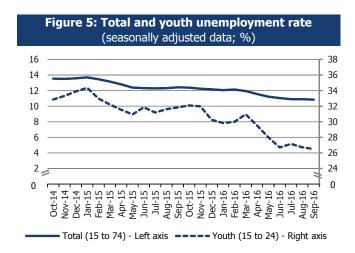

In August 2016, the definitive estimate for the unemployment rate was 10.9%, remaining unchanged from the previous month's level and having decreased by 0.3 p.p. from May 2016. This estimate was revised downwards, from the provisional value released one month ago, by 0.1 p.p..

In September 2016, the provisional estimate for the unemployment rate was 10.8%, having decreased by 0.1 p.p. from the definitive previous month's level and by 0.2 p.p. from three months before.

The unemployment rate of women (11.1%) was higher than that of men (10.6%) by 0.5 p.p.. From the previous month's levels, the former increased by 0.1 p.p. and the latter decreased by 0.2 p.p..

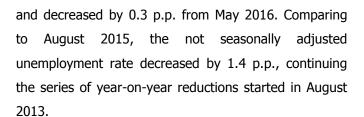

The youth unemployment rate stood at 26.5% and decreased by 0.2 p.p. from the previous month's level, while the adults' unemployment rate was 9.7% and remained unchanged from that month.

In August 2016, the definitive estimate for the not seasonally adjusted unemployment rate was 10.7%, having increased by 0.2 p.p. from the previous month

The monthly increase was followed by an increase of the unemployed population (1.9%; 10.4 thousand) and by a reduction of the employed population (0.2%; 7.4 thousand). On the other hand, the decrease from May 2016 came from the increase of the employed population (1.2%; 55.4 thousand) and the decrease of the unemployed population (1.8%; 9.8 thousand). For the year-on-year reduction contributed both the unemployed population decline (11.2%; 69.3 thousand) the employed population (2.0%; and growth 91.5 thousand).

In September 2016, the provisional estimate for the not seasonally adjusted unemployment rate was 10.8%, having increased by 0.1 p.p. from the previous month's level and by 0.2 p.p. from three months before, and decreased by 1.6 p.p. from September 2015.

The monthly growth observed in the unemployment rate resulted from both the increase of the unemployed population (0.7%; 3.6 thousand) and the decrease of the employed population (0.4%; 20.5 thousand). On the other hand, the observed growth from June 2016 was originated by the increase of the unemployed population (1.6%; 8.7 thousand) and the decrease of the employed population (0.1%; 3.9 thousand). Regarding the year-on-year decrease, the decline of the unemployed population (12.7%; 80.4 thousand) and the growth of the employed population (2.0%; 89.1 thousand) gave their contribution.

# **TECHNICAL NOTE**

#### **Labour Force Survey**

The main purpose of the Labour Force Survey is to characterise the population in terms of the labour market. It is a quarterly sample survey, addressed to families occupying the same dwelling in the national territory, which makes available quarterly and annual data.

Most of the characteristics observed in this survey report to the situation in one pre-defined week (from Monday to Sunday), known as reference week. The reference weeks are uniformly distributed throughout the quarters and years. The interviews usually take place in the week following the reference week.

The information is obtained directly, through computer-assisted interview, by using a mixed data collection mode: the initial interview is done face-to-face by an interviewer visiting the household and the other five interviews are done by telephone, if certain requirements are met.

Published data were calibrated by using the population estimates calculated from the final results of Census 2011.

# **Monthly Employment and Unemployment Estimates**

In 2014, Statistics Portugal initiated a monthly release of Labour Force Survey estimates for the main labour market indicators in addition to the usual quarterly estimates releases.

With this initiative, Statistics Portugal intends to provide to users monthly updated information on labour market recent developments, allowing, at the same time, a more complete reading picture than that provided so far by Eurostat in its monthly releases of the unemployed population and unemployment rate estimates for Portugal. With this dissemination, Statistics Portugal satisfies also a specific requirement from the PEEIs (Principal European Economic Indicators).

Taking advantage of the continuous nature of the Labour Force Survey collection process, it is possible to monthly obtain estimates related to successive sets of three months (moving quarters), assuring consistency with the quarterly released estimates.

The monthly estimates refer to centred moving quarters, where the reference month (m) corresponds to the central month of each moving guarter. In fact, the reference month of each Press Release corresponds to the central month of the guarter composed by m-1, m and m+1 months. As a consequence, the monthly changes are calculated on values that contain common months. Therefore, the comparison of moving quarters without common months should be done in relation to reference months three months earlier.

The option for disseminating centred moving quarters series aimed at avoiding delays in the detection of turning points in the economic cycle that arise from the use of simple moving averages, but it implies that the estimates for the latest released moving quarter are provisional (see "Revisions" section below).

As estimates of centred moving quarters, the values (not seasonally adjusted) of the reference months February, May, August and November of each year correspond to the estimates of the 1st, 2nd, 3rd and 4th natural quarters, respectively, whose results are published and analyzed with greater detail in the quarterly releases of the Labour Force Survey estimates.

The estimates for the reference month are always provisional, as they correspond to a moving quarter where for the first two months the Labour Force Survey data collection process has been already completed and for the third month a forecast was done based on time series models (state space approach for exponential smoothing models). For this third month, it was also taken into account data already collected for it. In this regard, Statistics Portugal has carried out a set of operational changes that allow ensuring the maximum collected information for that third month to be part of the projection exercise.

In this context, in each monthly Press Release the provisional estimates for the reference month and the definitive estimates for the previous months are published.

(continuation)

#### Information available

The data series selected for monthly releases refer to both employed and unemployed population, by sex and age group, and to the corresponding rates. In relation to these data series, it should be noted the following:

- For the purpose of creating long monthly data series needed for subsequent adjustment of seasonality, the two latest data series of the Labour Force Survey (from 1998 to 2010; from 2011 onwards) were previously linked.
- Unless otherwise stated, the data series analyzed in this Press Release are seasonally adjusted. For this reason, the analysis focuses on the comparison with the most recent periods. As agreed, Eurostat started using these estimates in its unemployment monthly releases. The original data series (not seasonally adjusted; as in the Statistics Portugal quarterly releases), are available in Tables 1 and 2 of the annex and at the Statistics Portugal Portal (<a href="www.ine.pt">www.ine.pt</a>).
- The indicators analyzed in this Press Release were calculated for the age subgroup of those aged 15 to 74 (as in the Eurostat News Release), which differs from the criterion adopted at the Statistics Portugal quarterly releases (people aged 15 and over, in line with the concepts in force of the International Labour Organization).

The back series for all the released and analyzed indicators in this Press Release, since February 1998 (quarter from January to March 1998), are available at the Statistics Portugal Portal.

Due to rounding, totals may not correspond exactly to the sum of the parts.

#### Revisions

The monthly released data are subject to revisions, as previously mentioned. The revisions come from obtaining the definitive estimates for the previous month (moving quarter) due to the conclusion of its last month collection process. In addition, the revisions also come from the updating of the seasonally adjusted data series whenever a new observation is added. Therefore, in each Press Release the definitive estimates for the previous reference month are published.

The impact of those revisions, measured by the difference between the estimates now released for August 2016 (definitive estimates) and the ones for that month published in the last Press Release, is the following:

Revision of August 2016 estimates - main indicators								
	Unit	Seasonally adjusted data	Not seasonally adjusted data					
Employed population (15 to 74) Unemployed population (15 to 74)	Thousands	12.7 - 1.8	14.0 - 1.4					
Employment rate (15 to 74) Unemployment rate (15 to 74) Youth unemployment rate (15 to 24) Adults' unemployment rate (25 to 74)	p.p.	0.1 - 0.1 - 1.2 0.0	0.1 0.0 - 1.3 0.1					

In August 2016, the downwards revision of the seasonally adjusted unemployment rate (-0.1 p.p.) occurred among men (-0.2 p.p.) and young people (-1.2 p.p.). The downwards revision of the unemployment rate was simultaneously explained by the upwards revision of the employed population (+0.3%) and by the downwards revision of the unemployed population (-0.3%). In the employed population, the major revisions occurred for men, women and adults (the three groups were revised by +0.3% each). In the unemployed population, the major downwards revisions where observed for young people (-5.7%) and men (-1.1%).

(to be continued)

(continuation)

### Some concepts

Unemployed: person aged 15 and 74 who, during the reference period, was simultaneously in the following situations:

- without work, i.e. was not in paid employment or self-employment;
- seeking work, i.e. had taken specific steps in a specified recent period (reference period or the three previous weeks) to seek paid employment or self-employment; and
- currently available for work, i.e. was available for paid employment or self-employment during the reference period.

Employed: person aged 15 and over who, during the reference period, was in one of the following situations:

- · did any work for pay or profit for at least one hour, including a familiar gain in money or gender;
- was not working but had jobs from which was temporarily absent;
- had a business, but was temporarily not working for a specific reason;
- was in a pre-retirement situation while working.

**Unemployment rate:** ratio between the unemployed population and the labour force.

U.R. (%) = (Unemployed population / Labour force) x 100

**Employment rate (15 and over):** ratio between the employed population and the working age total population (15 and over).

E.R. (%) = (Employed population / Total population 15 and over) x 100

For the indicators selected for monthly dissemination, it was considered the age subgroup of those aged 15 to 74.

For a more detailed definition of the concepts and methodological features of this statistical operation, consult the <u>Labour Force Survey</u> or the <u>Monthly Employment and Unemployment Estimates</u> methodological documents (both only in Portuguese) available at the Statistics Portugal website.

## **Next Press Release:**

30 November 2016: "Monthly Employment and Unemployment Statistics - October 2016".

1 December 2016: Eurostat News Release.
