

25 March 2019

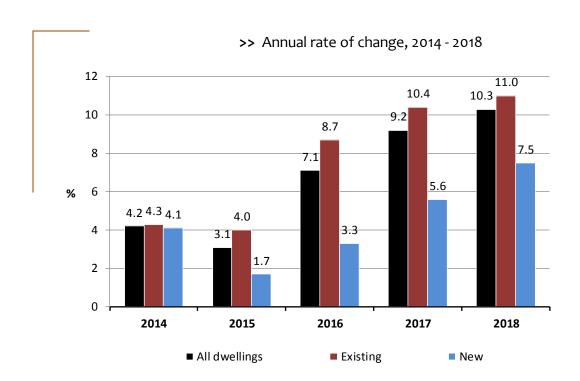

House Price Index 4th Quarter of 2018

House prices increased 10.3% on an annual basis and 9.3% in the fourth quarter of 2018

In 2018, the House Price Index (HPI) increased 10.3% when compared with the previous year. This rate of change was 1.1 percentage points (p.p.) higher than in 2017. From 2017 to 2018, the prices of existing dwellings (11.0%) increased at a higher rate than new dwellings (7.5%).

In the last quarter of 2018, the HPI year-on-year rate of change was 9.3%, up by 0.8 p.p. when compared to the previous quarter. Price increases were more intense for existing dwellings (9.5%) than for new dwellings (8.5%).

During 2018, a total of 178,691 dwellings were transacted, 16.6% more than in 2017. Transactions reached the 24.1 billion euros, which represents a yearly increase of 24.4%. In the fourth quarter, house sale transactions decelerated with the number of transactions moving from a year-on-year rate of change of 18.4% in the third quarter to 9.4%. In value, transactions decelerated from 29.1% in the third quarter to 10.7% in the fourth quarter. For the second consecutive quarter, the year-on-year increase in new housing (15.0%) exceeded that of existing housing (9.7%).

1. House Price Index

In 2018, the prices of the transacted dwellings continued to rise. The HPI presented a year-on-year rate of change of 10.3%, 1.1 p.p. more than in 2017. This price dynamic was observed both for existing dwellings (11.0%) and new dwellings (7.5%). For the second consecutive year, there was a reduction in the difference between existing and new dwelling price rises, dropping from 4.8 p.p. in 2017 to 3.5 p.p. in 2018.

In the fourth quarter of 2018, the HPI recorded a year-on-year rate of change of 9.3%, 0.8 p.p. more than in the previous quarter, reversing the deceleration in prices observed in the second and third quarters of 2018. As in the other quarters of the year, price increases were higher for existing dwellings than for new dwellings (9.5% and 8.5%, respectively).

On a quarter-to-quarter basis, HPI grew 2.0%. The acceleration of prices was more intense in the case of new dwellings, which increased by 2.7%, 0.8 p.p. above of the increase observed for existing dwellings (1.9%).

2. Number and value of house sales

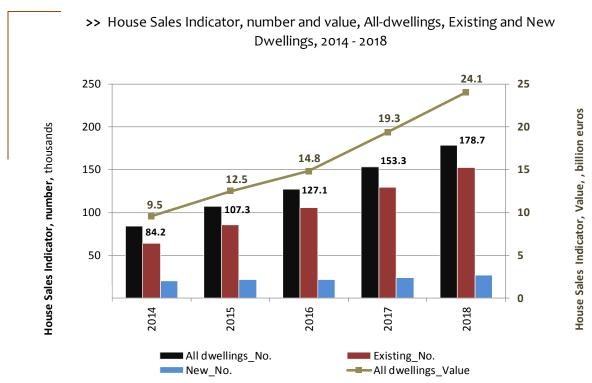

In 2018, a total of 178,691 dwellings were transacted, which represents a new maximum in the available series. When compared to 2017, 25,399 more dwellings were sold, corresponding to an increase of 16.6%. Of all the transactions, 85.2% corresponded to existing dwellings, 0.7 p.p. more than the previous year. The growth in the number of transactions of existing dwellings above that recorded in new dwellings, 17.5% and 11.6%, respectively, led to an increase in the relative weight of the first category. It should be noted, however, that this was the third consecutive year in which the difference in the growth rate of the number of transactions between the two categories was reduced, dropping from 26.0 p.p. in 2015 to 5.9 p.p. in 2018.

The value of transacted dwellings reached the 24.1 billion euros in 2018, 24.4% more than in the previous year. In the last five years, the value of house sales increased 26.0% annually, from 9.5 billion euros in 2014 (5.5% of the GDP) to 24.1 billion euros in 2018 (12.0% of the GDP). For the same period, the number of transactions rose at a slower rate (20.7% on an annual basis).

The following figure depicts the evolution of the number and value of sales of dwellings in the last five years.

In 2018, the transactions in the Área Metropolitana de Lisboa and in the Norte regions represented 64.6% of the total, 0.3 p.p. more than in 2017.

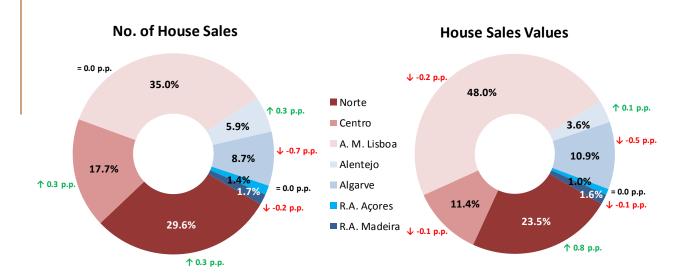

The Área Metropolitana de Lisboa concentrated 48.0% of the value of the transactions of the last year. For the first time since 2013, this region has experienced a reduction in its relative weight in the total value of house sales (-0.2 p.p.). On the other hand, the Norte region, with a relative share of 23.5%, obtained its highest since 2013. The Alentejo and the Norte regions, were the only to present increases in their respective relative weights. As in 2017, the Algarve together with the Centro and the Região Autónoma da Madeira continued to show in 2018, reductions in their relative sales value importance (-0.5 p.p., -0.1 p.p. and -0.1 p.p., respectively).

The next figure shows the distribution of the number and value of house sales by NUTS II region for 2018.

>> Percentage distribution of the number and value of house sales, by NUTS II, 2018 (percentage points difference compared with 2017)

EXPLANATORY NOTES

House Price Index

The House Price Index (HPI) measures the evolution of the acquisition prices of the dwellings purchased in the residential market in Portugal. The HPI is compiled using anonymised fiscal administrative information provided by the Tax and Customs Authority on the Municipal Property Transfer Tax (IMT) and the Municipal Property Tax (IMI).

The HPI is derived through the estimation of a functional relationship between the logarithm of the transaction prices of dwellings and their characteristics (e.g., area, location), being included in the probabilistic models of hedonic prices. The estimation is performed quarterly with data from two adjacent quarters. With this approach, it is possible to estimate the rate of change of prices controlling for changes in the quality of dwellings.

The HPI is a chained index with base 100 = 2015. The followed methodology enables the weighting structure to be updated annually with information on the value of dwelling transactions in the year immediately preceding the year in which the index refers.

Quarterly rate

The quarterly rate is the change in the index of a certain quarter compared with the index of the previous quarter expressed as a percentage. Although up-to-date, this measure can be affected by seasonal and other effects.

Annual rate

The annual rate is the change in the index of a certain quarter compared with the index of the same quarter in the previous year expressed as a percentage. In the presence of a stable seasonal pattern, seasonal effects do not influence this measure.

4-quarter average rate

The rolling 4-quarter average rate is the change in the average index of one year compared with the average index of the previous year expressed as a percentage. This moving average is less sensitive to transient changes in prices.

New dwellings

Dwellings that, at the time of the transaction, had never been used for residential purposes.

Existing dwellings

Dwellings that, at the time of the transaction, had already been used for residential purposes.

House Sales Indicator

Indicator that estimates the number of housing transactions carried out in a quarter for the national total and the segments of new homes and existing homes. The compilation of this statistic is based on information from the IMT and is based on transactions of urban articles. In calculating this indicator are not considered, similarly to what happens with the estimation of the rate of change in prices between two successive quarters, transaction parts of dwellings (i.e., are considered only transactions of dwellings in full).

The number of sales is available for the whole country and for the second level of geographical breakdown, as defined by the Nomenclature of Territorial Units for Statistics (NUTS II).

House Value Indicator

As the indicator of the number of sales, this statistic is based on information taken from the IMT on paid real estate tax. Following what was defined for the house sales indicator, the total value of transactions does not cover transactions of parts of dwellings.

The value of sales is also available to the second level of geographical breakdown, as defined by NUTS II.

Additional information

Further methodological information on the HPI is available on the National Statistics Institute website http://smi.ine.pt/DocumentacaoMetodologica/Detalhes/1464; available only in Portuguese).

Next press release

The HPI of the 1st quarter of 2019 is expected to be released on June 25th, 2019.
