

15 December 2021
PURCHASING POWER PARITIES
2020

THE PER CAPITA GROSS DOMESTIC PRODUCT (GDP-PC) VOLUME INDEX, EXPRESSED IN PURCHASING POWER PARITIES, REPRESENTED 76.4 % OF THE EU AVERAGE IN 2020, 2.2 PERCENTAGE POINTS LOWER THAN IN 2019

In 2020, the Portuguese volume index of Gross Domestic Product per capita expressed in purchasing power parities represented 76.4% of the European Union average, a value lower than the observed in 2019 (78.6%).

Actual Individual Consumption Expenditure per capita, which is more appropriate to evaluate households' well-being, was 84,4% of European Union average (85,6% in 2019).

Graph 1, with provisional values for 2020, shows the volume indices of Gross Domestic Product per capita (GDPpc) and Individual Consumption Expenditure per capita (ICpc) of the 37 participating countries in the comparison, measured in PPP and in relative terms compared to the European Union average (EU27=100). According to EUROSTAT, the Portuguese volume index of GDP-Pc expressed in purchasing power parities represented 76.4% of the EU average (EU27=100) in 2020, a value lower than the observed in 2019 (78.6%).

Considering the values sorted in descending order, it is observed that the dispersion of the GDPpc volume indicator measured in PPP in the 27 Member States of the EU is very significant. Luxembourg (263.1) has the highest volume index among all 37 countries included in this analysis, more than two and a half times above the EU27 average and about 5 times higher than that of Bulgaria (54.9), the EU country with the lowest value.

Actual Individual Consumption Expenditure per capita (AICpc) is more appropriate to evaluate households' material well-being. Despite the relative minor dispersion compared to GDPpc, there are, even so, substantial differences in AICpc among EU member states, as shown in Graph 1. Using this indicator (AICpc) as a reference, Portugal occupies the 13th position among the countries of the Eurozone. In 2020, the AICpc measured in PPS stood at 84.4% of the EU27=100.
