

UNEMPLOYMENT RATE AT 6.5% AND LABOUR UNDERUTILISATION RATE AT 11.6% FOR THE SECOND CONSECUTIVE MONTH

December 2023 (definitive estimates):

- The active population (5,298.1 thousand people) decreased from November (1.0 thousand people, which corresponded to a nearly null relative change) and increased from September 2023 (1.6 thousand people, nearly null relative change) and from December 2022 (1.6%).
- The employed population (4,952.3 thousand) remained practically unchanged from the previous month, having increased from three months before (0.1%) and from the same month of 2022 (1.8%).
- The unemployed population (345.8 thousand) decreased from the three periods under comparison: 0.5%, 0.7% and 1.7%, respectively.
- The unemployment rate, which stood at 6.5%, decreased by 0.1 percentage points (pp) from the previous month and from three months before and by 0.2 pp from a year earlier.
- The inactive population (2,396.4 thousand) increased by 0.1% both from November and from September 2023, having decreased by 1.9% from December 2022.
- The labour underutilisation rate was estimated at 11.6%, down 0.1 pp from both the previous month and three months before and down 0.7 pp from a year earlier.

January 2024 (provisional estimates)¹:

- The active population (5,335.6 thousand) increased from the three periods under comparison: 0.7%, 0.6% and 1.4%, respectively.
- The employed population (4,988.6 thousand) increased from the previous month (0.7%), from three months before (0.8%) and from the same month of 2023 (2.0%).
- The unemployed population (347.0 thousand) increased by 0.4% from December 2023, having decreased from the other two comparing periods: 1.5% and 5.9%, respectively.
- The unemployment rate remained at 6.5%, unchanged from the previous month, down 0.1 pp from three months before and down 0.5 pp from a year earlier.
- The inactive population (2,452.8 thousand) increased from the month before (2.4%), from three months before (2.7%) and from a year earlier (1.0%).
- The labour underutilisation rate stood at 11.6%, the same value as in December but down from October 2023 (0.2 pp) and from January 2023 (0.5 pp).

¹ The estimates for the last reference month (in this case, the quarter centred in January 2024: from December 2023 to February 2024) were calculated with incomplete information for the last month of the quarter (February 2024). These estimates will be revised next month (as described in the methodological note).

The table below presents the main indicators of the Monthly Employment and Unemployment Estimates.

Monthly Employment and Unemployment Estimates (16 to 74)

Main Indicators

	Unit	Seasonally adjusted data						
		Dec 2022	Jan 2023	Sep 2023	Oct 2023	Nov 2023	Dec 2023	Jan 2024 (p)
Active population	Thousands	5,215.3	5,259.5	5,296.5	5,303.0	5,299.1	5,298.1	5,335.6
Employed population		4,863.6	4,890.8	4,948.2	4,950.6	4,951.4	4,952.3	4,988.6
Unemployed population		351.7	368.7	348.2	352.4	347.7	345.8	347.0
Inactive population		2,443.6	2,428.5	2,393.3	2,388.5	2,395.1	2,396.4	2,452.8
Labour underutilisation		658.5	655.0	635.3	640.4	635.9	629.0	635.6
Activity rate	%	68.1	68.4	68.9	68.9	68.9	68.9	68.5
Employment rate		63.5	63.6	64.3	64.4	64.4	64.4	64.1
Unemployment rate		6.7	7.0	6.6	6.6	6.6	6.5	6.5
Inactivity rate		31.9	31.6	31.1	31.1	31.1	31.1	31.5
Labour underutilisation rate		12.3	12.1	11.7	11.8	11.7	11.6	11.6

Source: Statistics Portugal, Labour Force Survey.

Note: (p) – Provisional estimates.

In **December 2023**, compared to the previous month, the active population decreased by 1.0 thousand (which corresponded to a nearly null relative change), due to the decrease in the unemployed population (1.9 thousand; 0.5%) and the maintenance of the employed population. The inactive population increased by 1.3 thousand (0.1%)² because the increase of 4.6 thousand (0.2%) observed in the number of other inactive persons, those that do not search for a job nor are available to work, surpassed the decreased of 3.4 thousand (3.1%) in the number of inactive persons available to work but not searching for a job.

From three months before, the active population increased by 1.6 thousand (which represented a nearly null relative change) due to the increase of the employed population (4.1 thousand; 0.1%) which exceeded the decrease of the unemployed population (2.4 thousand; 0.7%). The inactive population increased by 3.1 thousand (0.1%) following the increase in the number of other inactive persons (5.8 thousand, 0.3%).

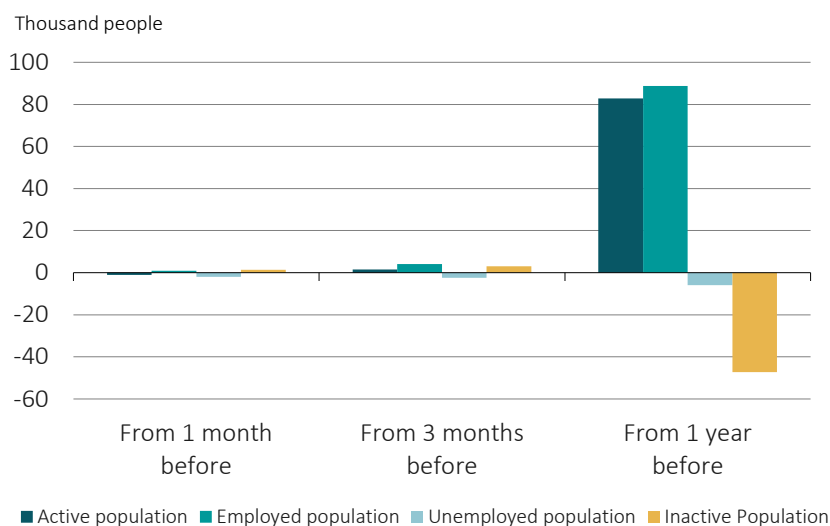

The active population increased by 82.8 thousand (1.6%) compared to December 2022 because of the increase observed in the employed population (88.7 thousand; 1.8%) that surpassed the decrease of the unemployed population (5.9 thousand; 1.7%). The inactive population decreased by 47.2 thousand people (1.9%) mainly due to the decrease in the number of other inactive persons (26.2 thousand; 1.1%).

These results determined the following changes in the unemployment rate, which stood at 6.5% in December 2023: negative change of 0.1 pp from November and September 2023 and of 0.2 pp from December 2022.

² The changes in the active population and in the inactive population are not necessarily identical. They are also influenced by the total population change that result from the natural increase and the net migration.

Figure 1. Change in the active, employed, unemployed and inactive population in December 2023
(seasonally adjusted data)

Also in December 2023, labour underutilisation covered 629.0 thousand people, down from the previous month (6.9 thousand; 1.1%), from three months before (6.3 thousand; 1.0%) and from a year earlier (29.5 thousand, 4.5%). The labour underutilisation rate was estimated at 11.6%, down 0.1 pp from November and September 2023 and down 0.7 pp from December 2022.

In **January 2024**, compared to the previous month, the active population increased by 37.5 thousand (0.7%) and the inactive population increased by 56.4 thousand (2.4%). The change of the active population resulted from the increase of 36.3 thousand (0.7%) in the employed population and of 1.2 thousand (0.4%) in the unemployed population. The change of the inactive population was mainly explained by the increase in the number of other inactive persons (53.3 thousand; 2.4%).

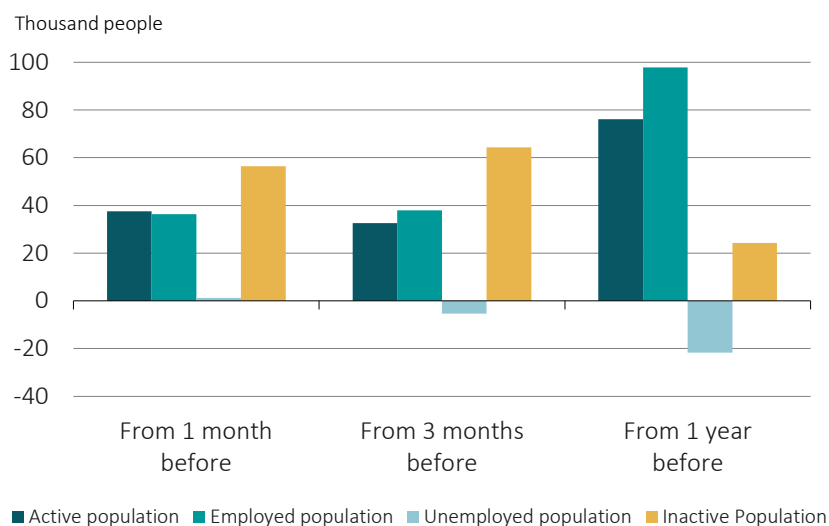

The increase of 32.6 thousand people (0.6%) observed in the active population from three months before resulted from the increase of 38.0 thousand (0.8%) in the employed population, which exceeded the decrease of 5.4 thousand (1.5%) in the unemployed population. The increase of the inactive population (64.3 thousand; 2.7%) as essentially due to the increase in the number of other inactive persons (59.8%; 2.7%).

The active population increased by 76.1 thousand (1.4%) from January 2023 following the increase in the employed population (97.8 thousand; 2.0%) that exceeded the decrease of the unemployed population (21.7 thousand; 5.9%). The inactive population increased by 24.3 thousand people (1.0%), mostly due to the increase in the number of other inactive persons (24.1 thousand; 1.1%).

These results determined the following changes in the unemployment rate, which stood at 6.5% in January 2024: same value as in the previous month, down from three months before (0.1 pp) and from the same month of 2023 (0.5 pp).

Figure 2. Change in the active, employed, unemployed and inactive population in January 2024
(seasonally adjusted data)

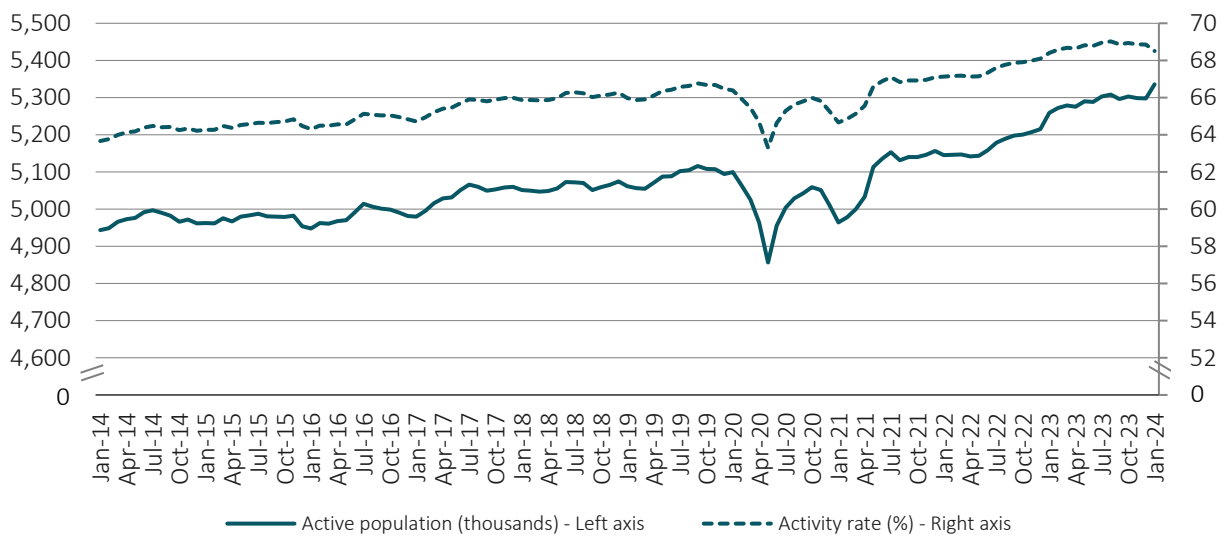

Note: The January 2024 estimates are provisional.

Finally, also in January 2024, labour underutilisation covered 635.6 thousand people, up from the previous month (6.6 thousand; 1.0%), down from three months before (4.8 thousand; 0.8%) and down from the same month of 2023 (19.4 thousand; 3.0%). The labour underutilisation rate – estimated at 11.6% – has remained unchanged from December 2023, having decreased from October and January 2023 (0.2 pp and 0.5 pp., respectively).

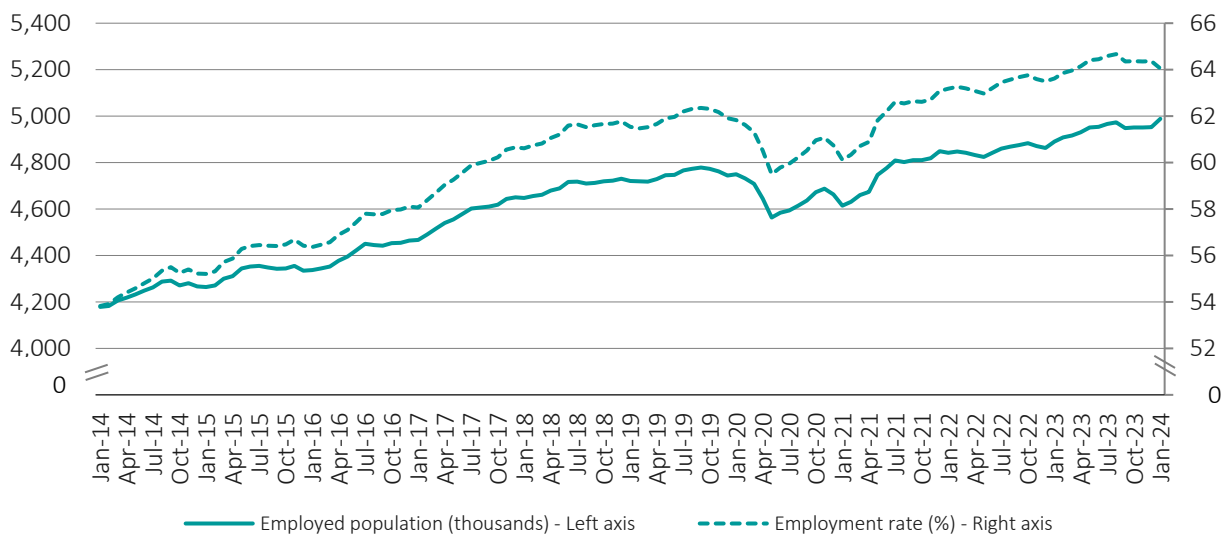

The following figures show the evolution in the last 10 years of the main indicators analysed in this Press Release. In January 2024, both the active population (5,335.6 thousand) and the employed population (4,988.6 thousand) reached their highest value since the beginning of the time series in 1998.

Figure 3. Active population and activity rate
(seasonally adjusted data)

Note: The January 2024 estimates are provisional.

Figure 4. Employed population and employment rate
(seasonally adjusted data)

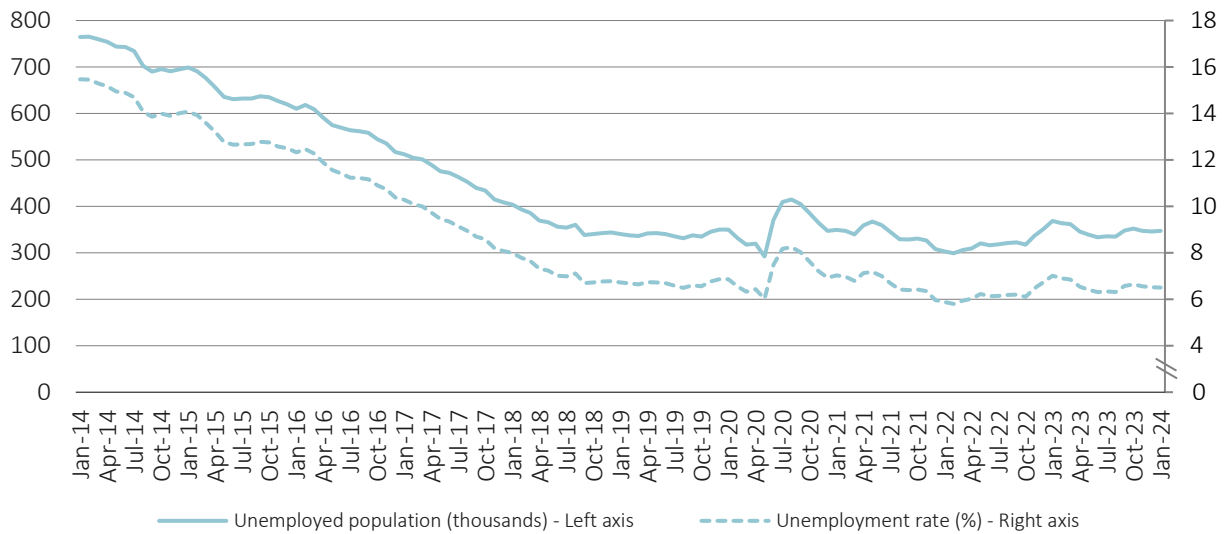

Note: The January 2024 estimates are provisional.

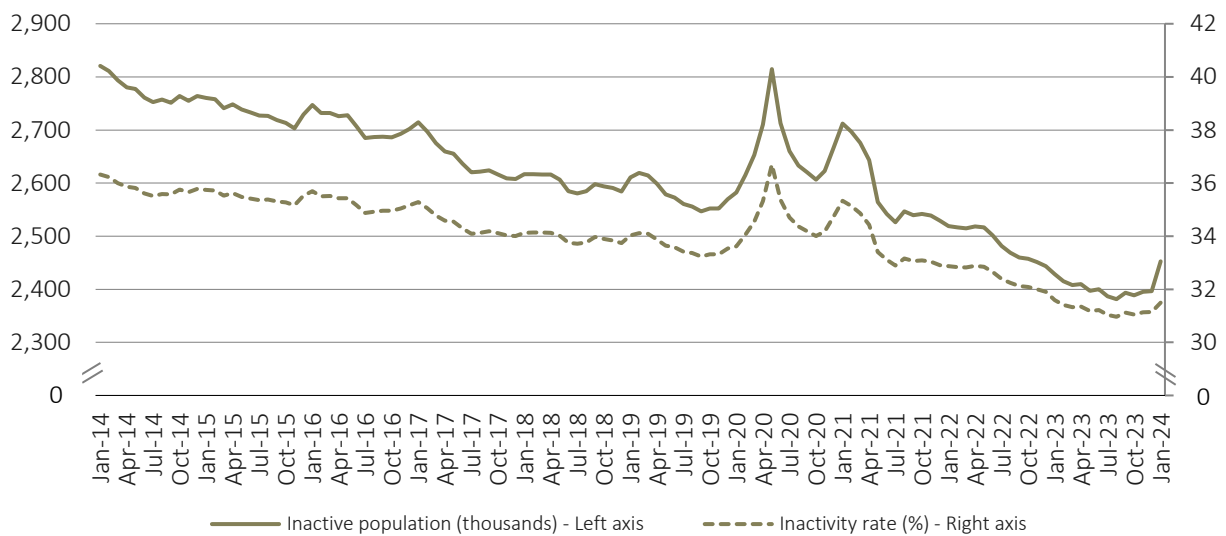

In January 2024, the unemployment rate stood at 6.5% for the second consecutive month, while the inactivity rate (31.5%) increased by 0.4 pp from the previous month, reaching its highest value since January 2023 (31.6%).

Figure 5. Unemployed population and unemployment rate
(seasonally adjusted data)

Note: The January 2024 estimates are provisional.

Figure 6. Inactive population and inactivity rate
(seasonally adjusted data)

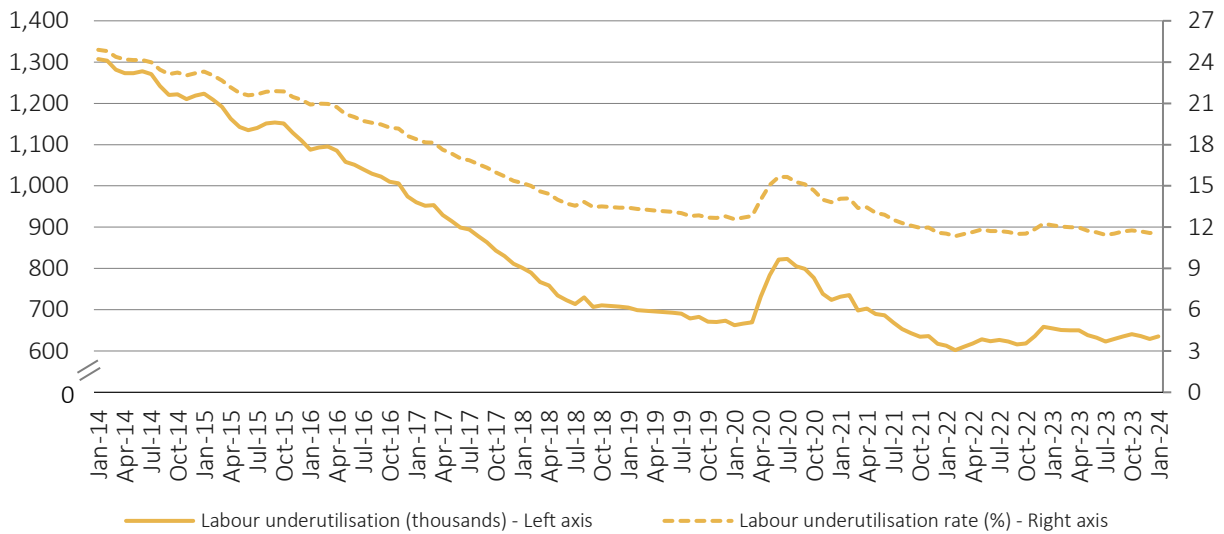

Note: The January 2024 estimates are provisional.

The labour underutilisation has increased in January 2024 to 635.6 thousand, while the labour underutilisation rate (11.6%) remained unchanged.

Figure 7. Labour underutilisation and labour underutilisation rate
(seasonally adjusted data)

Note: The January 2024 estimates are provisional.

METHODOLOGICAL NOTE

LABOUR FORCE SURVEY

The main purpose of the Labour Force Survey is to classify the population in terms of their participation in the labour market. It is a quarterly sample survey, addressed to all persons living in the national territory.

Most of the characteristics observed in this survey report to the situation in one pre-defined week (from Monday to Sunday), known as reference week. The reference weeks are uniformly distributed throughout the quarters and years. The interviews usually take place in the week following the reference week.

The information is obtained directly, through computer-assisted interview by using a mixed data collection mode: the initial interview is done face-to-face by an interviewer visiting the household and the other five interviews are done by telephone if certain requirements are met. It should be noticed that, following the COVID-19 pandemic and the measures adopted by the competent authorities, Statistics Portugal has decided, between the first fortnight of March 2020 and the end of the collection of the 2nd quarter of 2022, to suspend the face-to-face collection mode, replacing it exclusively with telephone interviews. After analysing the impact of adopting an exclusively telephone data collection mode, in November 2023 Statistics Portugal revised the estimates for the 2nd quarter of 2020 to the 2nd quarter of 2023 by incorporating the variable "completed level of education" into the process of calibrating the individual weights, in addition to the information usually used (monthly estimates of the resident population by sex, age group and region). The estimation of the results for the 3rd quarter of 2023 was carried out in a similar way and the monthly employment and unemployment estimates released from the 29th of November 2023 onwards reflect this revision.³

Published data were calibrated by using the population estimates calculated from the final results of Census 2011.

MONTHLY EMPLOYMENT AND UNEMPLOYMENT ESTIMATES

In 2014, Statistics Portugal initiated a monthly release of Labour Force Survey estimates for the main labour market indicators in addition to the usual quarterly estimates' releases.

With this initiative, Statistics Portugal intends to provide to users monthly updated information on labour market recent developments, allowing, at the same time, a more complete reading picture than that provided so far by Eurostat in its monthly releases of the unemployed population and unemployment rate estimates for Portugal. With this dissemination, Statistics Portugal also satisfies a specific requirement from the PEEIs (Principal European Economic Indicators).

³ For more information on the context, methodology and impacts of this revision, see the "Methodological note on the revision of the Labour Force Survey data: the context of the COVID-19 pandemic", published together with the [Press Release "Employment Statistics – 3rd quarter of 2023"](#).

Taking advantage of the continuous nature of the Labour Force Survey collection process, it is possible to monthly obtain estimates related to successive sets of three months (moving quarters), assuring consistency with the quarterly released estimates.

The monthly estimates refer to centred moving quarters, where the reference month (m) corresponds to the central month of each moving quarter. In fact, the reference month of each Press Release corresponds to the central month of the quarter composed by m-1, m and m+1 months. Therefore, the monthly changes are calculated on values that contain common months. Therefore, the comparison of moving quarters without common months should be done in relation to reference months three months earlier.

The option for disseminating centred moving quarters series aimed at avoiding delays in the detection of turning points in the economic cycle that arise from the use of simple moving averages, but it implies that the estimates for the latest released moving quarter are provisional (see “Revisions” section below).

As estimates of centred moving quarters, the values (not seasonally adjusted) of the reference months February, May, August, and November of each year correspond to the estimates of the 1st, 2nd, 3rd, and 4th natural quarters, respectively, whose results are published and analysed with greater detail in the quarterly releases of the Labour Force Survey estimates.

The estimates for the last reference month are always provisional, as they correspond to a moving quarter where for the third month the data collection is not completed yet. In fact, for the first two months (m-1 and m) the data collection from the Labour Force Survey is already completed, while for the third month (m+1) only partially collected data are available.

In this context, in each monthly Press Release the provisional estimates for the reference month and the revised estimates for the previous months are published, due the availability of complete information for the last moving quarter.

INFORMATION AVAILABLE

The data series selected for monthly releases refer to both employed and unemployed population, by sex and age group, and to the corresponding rates. In relation to these data series, it should be noted the following:

- Unless otherwise stated, the data series analysed in this Press Release are seasonally adjusted. For this reason, the analysis focuses on the comparison with the most recent periods. As agreed, Eurostat started using these estimates in its unemployment monthly releases. The original data series (not seasonally adjusted; as in the Statistics Portugal quarterly releases), are available in Tables of the annex.
- The indicators analysed in this Press Release were calculated for the age subgroup of those aged 16 to 74 (as in the Eurostat News Release), which differs from the criterion adopted at the Statistics Portugal quarterly releases (people aged 16 to 89, in line with the concepts in force of the International Labour Organization).

The back series for all the released and analysed indicators in this Press Release, since February 1998 (quarter from January to March 1998), are available at Statistics Portugal website and the links to them can be found in the Excel file released together with this Press Release.

Due to rounding, totals may not correspond exactly to the sum of the parts.

REVISIONS

The monthly released data are subject to regular revisions, as previously mentioned. The revisions come from obtaining the final estimates for the previous reference month (moving quarter) due to the conclusion of its last month collection process. Therefore, in each Press Release the not seasonally adjusted final estimates for the previous reference month are published. In addition, are also presented the final estimates resulting from updating of the seasonally adjusted data series whenever a new observation is added.

Adults' unemployment rate (25 to 74)		0.0	0.0
Labour underutilisation rate		0.0	0.0

SOME CONCEPTS

Unemployed: person aged 16 and 74 who during the reference period met simultaneously the following conditions:

- neither had a job nor was at work;
- had actively sought work, i.e., had actively searched for a paid or unpaid job during the specified period (reference period or the three previous weeks); and
- was available for a paid or unpaid job.

Employed: person aged 16 to 89 who, during the reference period, was in one of the following situations:

- worked for at least one hour for a wage or salary, in cash or in kind (including unpaid family work);
- had a formal attachment to his/her job but was not at work temporarily;
- was in early retirement but working in the reference week.

Working age resident population: Resident population aged 16 to 89.

Active: person aged 16 to 89 who, during the reference period, furnish the supply of labour force for the production of economic goods and services (was employed or unemployed).

Labour force: population formed by all active persons.

Extended labour force: corresponds to the labour force enlarged by the inactive seeking work but not immediately available and the inactive available but not seeking work.

Labour underutilisation: indicator that aggregates the unemployed population, the underemployment of part-time workers, the inactive seeking work but not immediately available, and the inactive available but not seeking work.

Unemployment rate: rate that defines the relation between the unemployed population and the labour force.

$$\text{U.R. (\%)} = (\text{Unemployed population} / \text{Labour force}) \times 100$$

Employment rate: rate that defines the relation between the employed population and the working age population.

$$\text{E.R. (\%)} = (\text{Employed population} / \text{Working age population}) \times 100$$

Activity rate of the working age population: rate that defines the relation between the labour force and the working age population.

$$\text{A.R. (\%)} = (\text{Labour force} / \text{Working age population}) \times 100$$

Inactivity rate of the working age population: rate that defines the relation between the working age inactive population and the working age population.

$$\text{I.R. (\%)} = (\text{Working age inactive population} / \text{Working age population}) \times 100$$

Labour underutilisation rate: rate that defines the relation between the labour underutilisation and the extended labour force.

$$\text{L.U.R. (\%)} = (\text{Labour underutilisation} / \text{Extended labour force}) \times 100$$

For the indicators selected for monthly dissemination, it was considered the age subgroup of those aged 16 to 74.

For a more detailed definition of the concepts and methodological features of this statistical operation, consult the [Labour Force Survey](#) or the [Monthly Employment and Unemployment Estimates](#) methodological documents (both only in Portuguese) available at Statistics Portugal website.
