

August, 14th 2009

Employment Statistics 2nd guarter of 2009

Unemployment rate at 9.1% in the 2nd quarter of 2009

The unemployment rate estimated for the 2nd quarter of 2009 was 9.1%. This value is up 1.8 percentage points (p.p.) from the same quarter of 2008 and 0.2 p.p. from the previous quarter. The number of unemployed was estimated to reach 507.7 thousand individuals, having increased by 23.9% from the same quarter of the previous year, and by 2.4% from the previous quarter. The number of employed decreased by 2.9%, compared with the same quarter of 2008, and by 0.4%, compared with the previous quarter.

1. Labour force (active population)

The Labour Force Survey results for the 2nd quarter of 2009 indicate that the labour force (active population) in Portugal decreased by 1.0% (corresponding to 54.1 thousand individuals), compared with the same quarter of 2008, and by 0.2% (10.9 thousand), compared with the previous quarter.

The working age population participation rate (aged 15 years old and over) was estimated at 61.9% in the 2^{nd} quarter of 2009. This rate went down by 0.8 p.p. from the 2^{nd} quarter of 2008, and by 0.2 p.p. from the previous quarter.

The participation rate of working age women stood at 55.8%, while that of men attained 68.5%.

2. Employed population

In the 2nd quarter of 2009, the employed population, totalling 5 076.2 thousand individuals, decreased by 2.9% (corresponding to 151.9 thousand individuals), compared with the same quarter of 2008, and by 0.4% (22.9 thousand), compared with the previous quarter.

The following results have contributed to the abovementioned year-on-year decrease:

- The decrease in the employment for men, which corresponded to 105.5 thousand individuals and explained 69.5% of the global employment decrease.
- The decrease of 111.6 thousand employed individuals aged 15 to 34 years old and of 22.5 thousand individuals aged 45 to 64 years old. The number of the employed aged 35 to 44 and of the employed aged 65 and over decreased by less (5.8 and 12.0 thousand individuals, respectively).
- The decrease of employed having completed the first or second stages of basic education, by 234.9 thousand individuals. On the contrary, the number of employed having completed the (upper) secondary and post-secondary non-tertiary level of education and also the tertiary level of education rose (by 48.9 thousand and 34.1 thousand individuals, respectively).
- The decrease of employed in the mining and quarrying, manufacturing, electricity, gas and water supply sector, by 95.0 thousand individuals. This decrease was accounted by similar decreases in

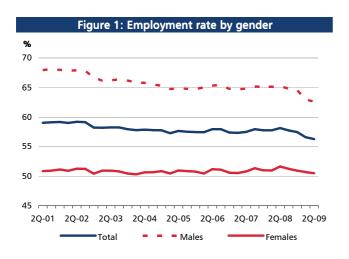

Employment Statistics - 2nd quarter of 2009

1/7

manufacturing activities (which employed less 42.7 thousand individuals this quarter) and construction (45.2 thousand). The agriculture, forestry, and fishing sector, on one hand, and the services sector, on the other, recorded smaller decreases in employment, corresponding to 36.1 thousand and 20.7 thousand individuals, respectively.

- The decrease in the number of employees, by 104.7 thousand individuals, and, by a smaller amount, in the number of self-employed, by 37.1 thousand. Among the employees, a decrease was recorded in the number of those with a temporary job (51.5 thousand). The number of those holding a permanent contract or in other contractual arrangements decreased also (by 22.9 and 30.5 thousand, respectively), but these contributed less to the overall decrease in the number of employees.
- The decrease in the number of full-time workers, which corresponded to 113.7 thousand individuals and explained 74.9% of the global employment decrease.

The employment rate (15 years and over) stood at 56.3%, in the 2^{nd} quarter of 2009. This value was lower than the one recorded in the same quarter of 2008 by 1.8 p.p. and than that of the previous quarter by 0.3 p.p..

The male employment rate (62.6%), in the 2nd quarter of 2009, exceeded that of women (50.5%) by 12.1 p.p.. In both cases, the rates decreased, from the same quarter 2008 and from the previous quarter.

3. Unemployed population

The unemployed population in Portugal, estimated at 507.7 thousand individuals in the 2^{nd} quarter of 2009, increased by 23.9% (97.8 thousand individuals), when compared with the 2^{nd} quarter of 2008, and by 2.4% (11.9 thousand), when compared with the previous quarter.

The following results have contributed to the year-on-year increase in the unemployed population:

- The increase in the number of men unemployed (69.4 thousand individuals), which explained 71.0% of the overall increase in unemployment.
- The increase in unemployment of individuals of all age groups, mainly of those aged 25 to 34 years old (37.6 thousand) and of those aged 45 years old and over (26.5 thousand).
- The increase in the number of unemployed individuals having completed an education level corresponding to the first and second stages of basic education (corresponding to 70.7 thousand individuals). To a lesser extent, the unemployment increased also among the individuals who completed an upper secondary or post-secondary non-tertiary level of education (24.4 thousand) and a tertiary level of education (2.8 thousand).
- The increase in the number of unemployed seeking a new job (98.3 thousand individuals), coming from the mining and quarrying, manufacturing, electricity, gas and water supply, and construction sector (58.4 thousand individuals) and from the services sector

2/7

Employment Statistics - 2nd quarter of 2009

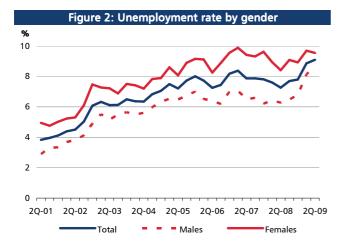

(35.2 thousand). The number of unemployed seeking a first job remained unchanged.

 The increase in the number of unemployed seeking a job for less than a year, by 70.5 thousand individuals, which explained 72.1% of the overall increase in unemployment.

The unemployment rate was estimated at 9.1%, in the 2^{nd} quarter of 2009. This value is up 1.8 p.p. from the 2^{nd} quarter of 2008, and 0.2 p.p. from the previous quarter.

In the 2nd quarter of 2009, the unemployment rate stood at 8.7% for men and at 9.5% for women. In both cases, the rates increased from the same quarter 2008 (2.4 p.p. and 1.1 p.p., respectively). Comparing with the previous quarter, the unemployment rate increased for men (0.6 p.p.) and decreased for women (0.2 p.p.).

The increase recorded in the unemployment rate, when compared with the previous quarter, resulted from the combination of the two following effects: the decrease of the employed population (of 0.4%) and the increase of the unemployed population (of 2.4%), corresponding to 22.9 thousand and to 11.9 thousand individuals, respectively.

The quarterly increase in the unemployed population occurred mainly in the following population groups: men;

individuals with 45 years old and over; individuals who have completed an upper secondary or post-secondary non-tertiary level of education; individuals seeking a new job (mainly of those who were formerly employed in the mining and quarrying, manufacturing, electricity, gas and water supply, and construction sector); and unemployed seeking for a job for one year or over.

4. Inactive population

In the 2nd quarter of 2009, the inactive population aged 15 years old and over increased by 2.4%, when compared to the same quarter of 2008, and by 0.5%, when compared with the previous quarter (corresponding to 79.2 thousand and 16.8 thousand individuals, respectively).

The inactivity rate (15 and over) reached 38.1%, in the 2^{nd} quarter of 2009, standing at 31.5% for men and at 44.2% for women.

5. Quarterly flows between labour market states

From the 1st quarter of 2009 to the 2nd quarter of 2009, 1.3% of the individuals initially employed moved into unemployment and 1.1% moved into inactivity, with the proportion of employees moving out of this situation totalling 2.4% in the 2nd quarter of 2009 (97.5% remained employed). From the 4th quarter of 2008 to the 1st quarter of 2009, this percentage had been larger (2.9%).

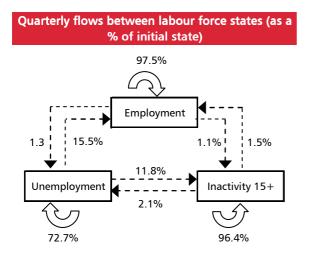

The flows out of unemployment between the two quarters were, in relative terms, larger than the flows out of employment. From total individuals who were unemployed in the 1st quarter of 2009, 27.3% moved out of this labour market state in the following quarter, 15.5% of which became employed and 11.8% moved into inactivity. The percentage of individuals moving from unemployment into employment was larger than that

3/7

Employment Statistics - 2nd quarter of 2009

observed in the flows from the 4^{th} quarter of 2008 to the 1^{st} quarter of 2009 (had been 14.5%), whereas the percentage of individuals moving from unemployment into inactivity was smaller (had been 14.6%).

From total individuals aged 15 years old and over considered to be inactive in the 1st quarter of 2009, 1.5% moved into employment, and 2.1% moved into unemployment, in the following quarter. Both percentages are equal to those observed in the flows from the 4th quarter of 2008 to the 1st quarter of 2009.

6. Unemployment rates by NUTS II regions

In the 2nd quarter of 2009, the highest unemployment rates were recorded in NUTS II regions Alentejo (11.3%), Norte (10.5%) and Lisboa (9.4%). The lowest values were observed in Centro (6.3%), Região Autónoma dos Açores (7.0%) and Região Autónoma da Madeira (8.1%).

Table 1: Unemployment rates by NUTS II region (NUTS-2002)							
		Unit: %					
	2Q-2008	1Q-2009	2Q-2009				
Portugal	7.3	8.9	9.1				
Norte	8.2	10.1	10.5				
Centro	5.2	6.7	6.3				
Lisboa	7.9	9.1	9.4				
Alentejo	8.5	10.2	11.3				
Algarve	7.2	10.3	9.0				
R. A. Açores	5.4	6.7	7.0				
R. A. Madeira	6.1	6.8	8.1				

Source: INE, Employment Statistics - 2nd guarter of 2009.

Comparing to the same quarter of the previous year, and similarly to the overall picture in Portugal, the unemployment rate increased in all regions. The largest increases were recorded in Alentejo (2.8 p.p.), Norte (2.3 p.p.), and Região Autónoma da Madeira (2.0 p.p.).

Compared to the previous quarter, it was observed a generalized increase in the unemployment rate, except in Centro and Algarve, where the unemployment rates decreased. The largest increases were observed in Região Autónoma da Madeira (1.3 p.p.) and Alentejo (1.1 p.p.).

Source: INE, Employment Statistics - 2nd quarter of 2009.

Notes:

(a) With the coming into force of the NACE-Rev. 2, and to allow a gradual transition between the NACE-Rev. 1.1 and the NACE-Rev. 2, the Labour Force Survey launched a process of double coding the economic activities and the estimates were published by both NACE-Rev. 1.1 and NACE-Rev. 2 during 2008 and the 1st quarter of 2009. From the 2nd quarter of 2009 onwards it will be used only NACE-Rev. 2.

(b) The variable "duration of search for employment" does not include the unemployed workers that have already found a job which will start within a period of at most 3 months. As a consequence, the sum of the number of unemployed individuals by duration of search can be less than the total unemployed population.

o Figure that corresponds to less than half the absolute value of the unit used. - Null.

TECHNICAL NOTE

The main purpose of the Labour Force Survey is to characterise the population in terms of the labour market. It is a quarterly sample survey, addressed to families occupying the same dwelling in the national territory, which makes available quarterly and annual data. The information is obtained directly, though computer-assisted interview. Published data were calibrated, based on independent estimates of the population, calculated from the definitive results of the 2001 Census.

SOME CONCEPTS

For additional concepts see the publication Employment Statistics - 2nd quarter 2009 ("Estatísticas do Emprego - 2º trimestre de 2009").

Participation rate

Rate that is defined as the ratio of the labour force (active population) to total population. P.R. (%) = (Labour force / Total population) x 100

Participation rate (15 and over)

Rate that is defined as the ratio of the labour force to working age population (aged 15 years old and over). P.R. (%) = (Labour force / Population aged 15 years old and over) x 100

Unemployment rate

Rate that is defined as the ratio of the unemployed population to total labour force. U.R. (%) = (Unemployed population / Labour force) x 100

Long term unemployment rate

Rate that is defined as the ratio of the population unemployed for 12 months or over to total labour force. U.R. (%) = (Population unemployed for 12 months or over / Labour force) x 100

Employment rate (15 and over)

Rate that is defined as the ratio of the employed population to working age population (aged 15 years old and over). E.R. (%) = (Employed population / Population aged 15 years old and over) x 100

Inactivity rate (aged 15 and over)

Rate that is defined as the ratio of inactive working age population (aged 15 years old and over) to total working age population. I.R. (%) = (Inactive population aged 15 years old and over / Population aged 15 years old and over) x 100

Year-on-year rate of change

The year-on-year change compares the level of the variable in the current quarter with that of the corresponding quarter of the previous year. This rate of change, considering a seasonal stable pattern, is not affected by this type of fluctuation, but may, however, be influenced by specific effects in a given quarter.

Quarterly rate of change

The quarterly change compares the level of the variable over two consecutive periods. Although this indicator permits to monitor the recent pace of the variable, its calculation is particularly influenced by seasonal effects and other more specific effects in one (or both) quarters under comparison.

Annual rate of change

The annual change compares the average level of the variable for the four quarters of the last year over the average level of the variable for the four quarters of the previous year. Being an average, this indicator is less sensible to sporadic effects in the variable.

DATE SCHEDULED FOR THE NEXT PRESS RELEASE

November, 17th 2009.

The publication Employment Statistics -2^{nd} quarter of 2009 ("Estatísticas do Emprego -2^{o} trimestre de 2009") associated with this press release is available, free of charge, at <u>http://www.ine.pt/portal/page/portal/PORTAL_INE/Publicacoes</u>.
