IBERIAN PENINSULA IN FIGURES - 2025

The national statistical institutes of Portugal and Spain have jointly published the 22nd edition of Iberian Peninsula in Figures – 2025.

Published annually since 2004, this publication brings together official statistical indicators that enable the comparison of the social, economic, environmental and demographic characteristics of Portugal and Spain, placing them in the broader context of the European Union.

The institutes have published the *Iberian Peninsula in Numbers* since 2004, thus reflecting more than two decades of statistical cooperation between the two countries.

The fourteen thematic chapters (territory and environment; population; education and culture; health and social protection; living conditions; technology; labour market; national accounts; international trade in goods; industry, construction and energy; agriculture and fisheries; services; transport; and tourism) offer different perspectives on the realities of the two countries. The publication is trilingual, with texts in Portuguese, Spanish and English.

In this publication, the institutes present harmonised official statistics through graphical representations and explanatory texts, enabling users to compare Portugal and Spain directly and identify their similarities, differences and developments.

The 2025 edition includes an update of most regional indicators at NUTS level 2, reflecting the recent revision of Portugal's territorial classification, which now distinguishes Greater Lisbon, Península de Setúbal, and Oeste e Vale do Tejo as separate regions.

Iberian Peninsula in Figures – 2025 is available for online consultation and free download from the Statistics Portugal website.
