ECONOMIC ACCOUNTS FOR AGRICULTURE

Agricultural Income 2009 – 1st estimate

In 2009, The income generated by Agriculture should decrease 2.9%

According to the first estimates for 2009 on Economic Accounts for Agriculture (EAA), it is estimated that the Gross Value Added (GVA) in agriculture should decrease 1.5% in nominal terms. The factor income should decline 5.3%, as a consequence of both GVA and “Other subsidies on production” decreases. Agricultural Labour Input should continue the downwards trend and a decrease of 2.9% is envisaged. The income from the agricultural activity, per annual working unit, should be reduced, in real terms, 2.9%.
