Business and Consumer Surveys

February 2010

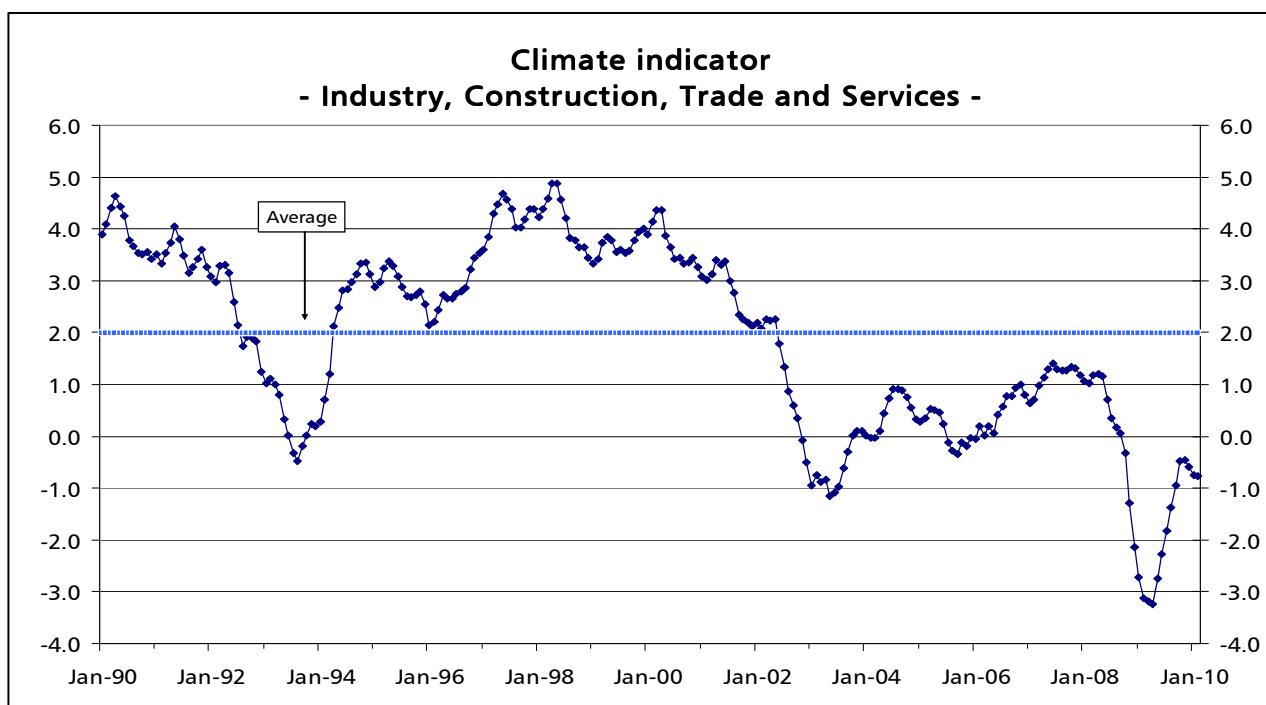

The economic climate and the Consumer confidence indicators decrease in February

The economic climate indicator has declined slightly since December, opposing the strong increase started in May after recording the lowest value of the series in the two previous months. However, in February, the Manufacturing Industry, the Trade and the Services confidence indicators increased, more intensely in the last case. On the contrary, the Construction and Public Works confidence indicator accentuated the previous downward path.

The Consumer confidence indicator decreased in the last four months, reversing the strong upward movement begun in April, after attaining the lowest value of the series.

In February, the climate indicator maintained the slightly downward movement begun in December. Notice that this indicator is not the average of the confidence indicators of the different sectors, which presented dissimilar evolutions. In Construction and Public Works¹ the confidence indicator declined in February, maintaining the tenuous downward path started in August, due to the deterioration of both components, opinions on the order books' evolution and employment perspectives, more significant in the second case. On the contrary, in Manufacturing Industry the confidence indicator increased in the last two months although slightly in February, reversing the pronounced decline recorded in December. This evolution was led by the positive contribution of the opinions on global demand and on the stocks of finished goods, in February stronger in the first case, while the production perspectives recorded a negative contribution. In Trade, the confidence indicator also increased slightly, extending the strong upward movement started in April (in March 2009 this indicator attained the minimum value of the series). In the last two months, the confidence indicator increased in both subsectors, Wholesale and Retail Trade. The Services' confidence indicator recovered in February, opposing the downward movement of the three previous months. In the reference month this behaviour was due to the positive contribution of all components, opinions on the order books' evolution and on the business activity and demand perspectives, more intense in the first case. It should be noticed that, considering monthly values without three month moving averages, the Manufacturing Industry, the Trade and the Services confidence indicators decreased in February.

In the last three months, the decrease in the Consumer confidence indicator was driven by the negative contribution of all components, especially of the perspectives on the country's economic situation.

¹ Unless stated otherwise, the analysis in this press release refers to three-month moving average.

Confidence indicators and their underlying series (3mma; balances; wide range)

	First Period	Average Value	Standard Deviation	Minimum Value Date	Maximum Value Date		
1 Manufacturing Industry - confidence indicator (2+3+4)/3 (a)	Jan-89	-6.6	8.6	-35.2 Feb-09	7.9 Jan-89

* Series average since its beginning till the current observation.

** In May 2003 a break in the series occurred, until that moment the reference period was the month under review and afterwards it refers to the past 3 months.

*** In May 2003 a break in the series occurred, until that moment the question referred to the next 6 months.

**** From September 2004 onwards Services sector was included, besides industry, trade and construction.

(a) Data after December 2002 is computed using a new sample. Back data was rebased.

(b) Data after January 2003 is computed using a new sample. Back data was rebased.

(c) Data after September 2003 is computed using a new sample. Back data was rebased.

(d) Seasonal adjusted series.
