

# Identification of specific areas within provincial capital cities and their functional areas in terms of the demographic and economic situation of their inhabitants - GIS-based spatial analysis

Adam Dąbrowski – Statistical Office in Poznań

This work has been prepared as part of a project financed from the European Union funds under “Technical Assistance” Operational Programme 2014-2020

# Purpose

1. Identify and monitor the social and economic spatial structure within the cities and their surroundings
  2. Identifying special zones in terms of:
    - The age structure of the population with particular emphasis on indicators characterizing the ageing of the population
    - The economic structure of the residents
  3. Provide as detailed information as possible for the local authorities and researchers
-

# Data

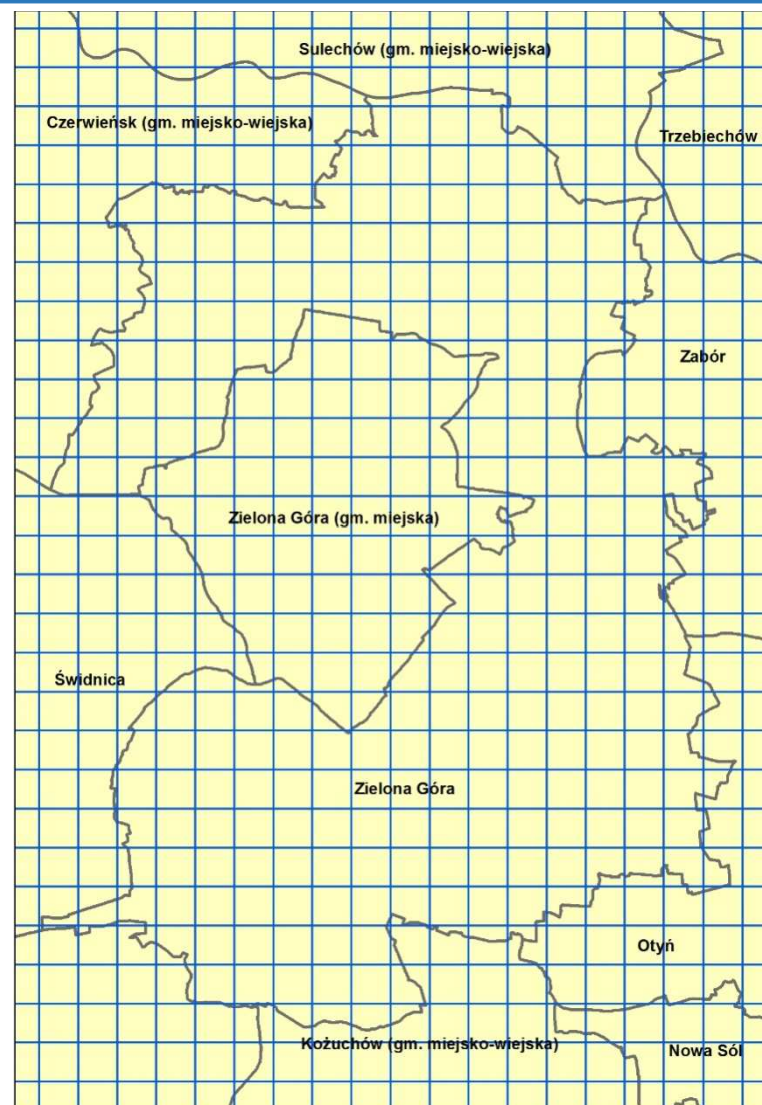

1. Reference period
    - 2011
  2. Data source
    - Information collected during the 2011 Census
  3. Spatial scope
    - Provincial cities with their functional areas
    - Framework: a grid of **500m x 500m squares**
-

# Source data

## Spatial data:

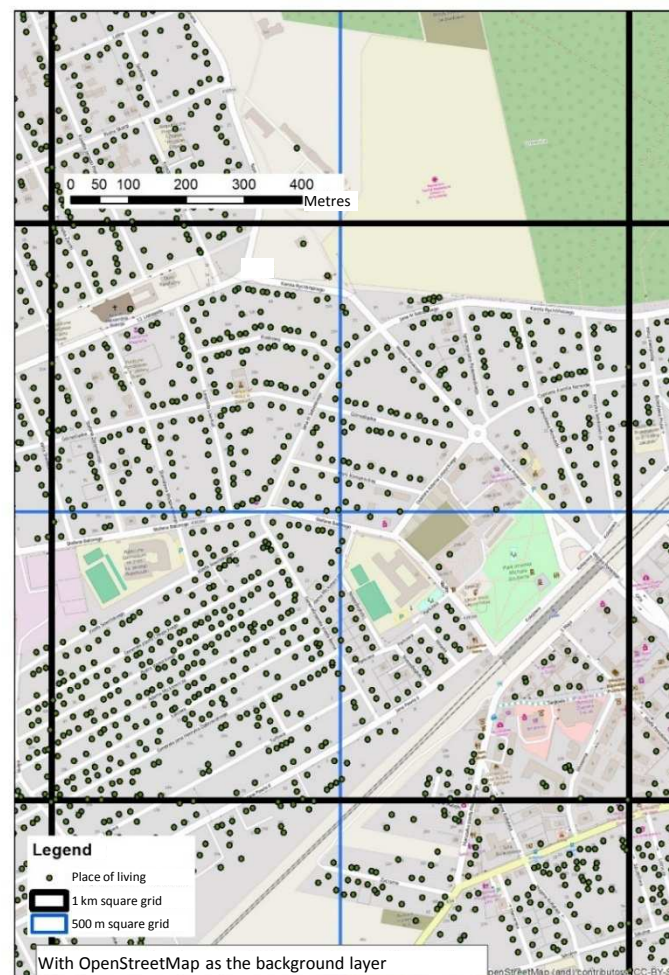

- 1km x 1km grid of squares acquired from the European Forum for Geography and Statistics
  - Spatial reference system: The Lambert azimuthal equal-area projection (ETRS 1989 LAEA)

# Data processing

- Creation of a grid of 500m x 500m squares

# The demographic indices and age structure

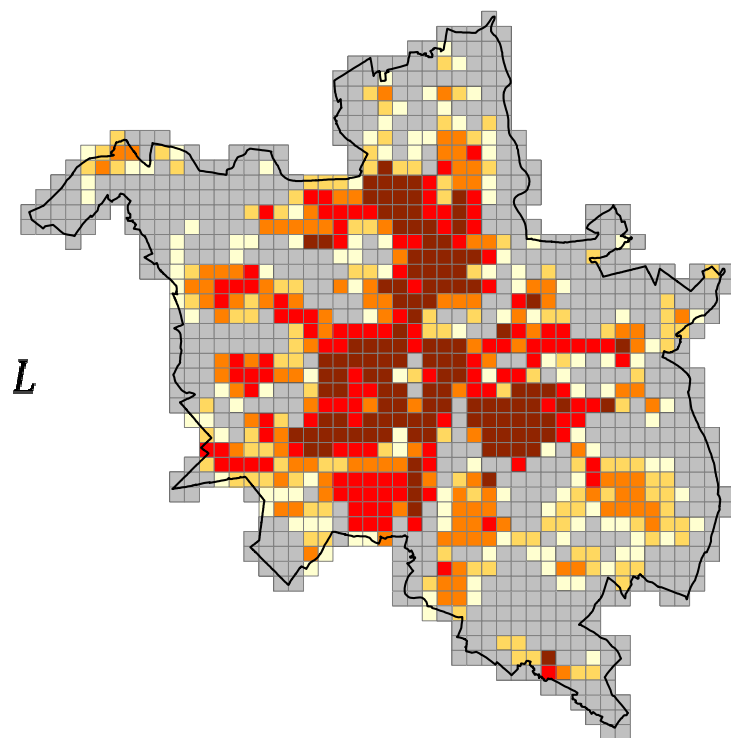

---

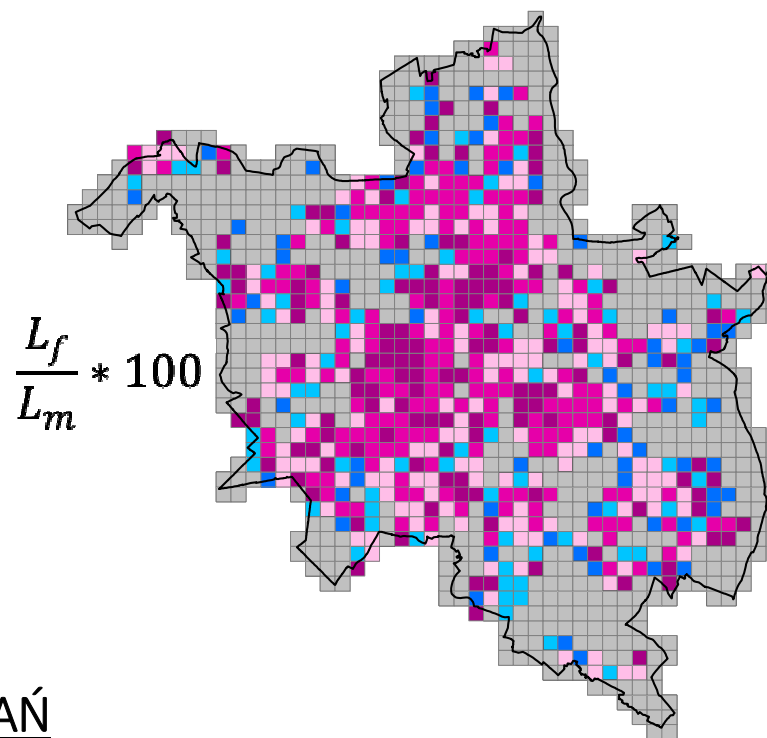

Indicators for territorial policies: closing data gaps by using traditional and new sources and methods

# Population

# Feminisation

POZNAŃ

In person:

- 1538 and more
- 451 - 1537
- 188 - 450
- 58 - 187
- 11 - 57

- Area excluded from the research
- Administrative border

Number of women per 100 men:

- 121 and more
- 111 - 120
- 101 - 110
- 91 - 100
- 90 and less

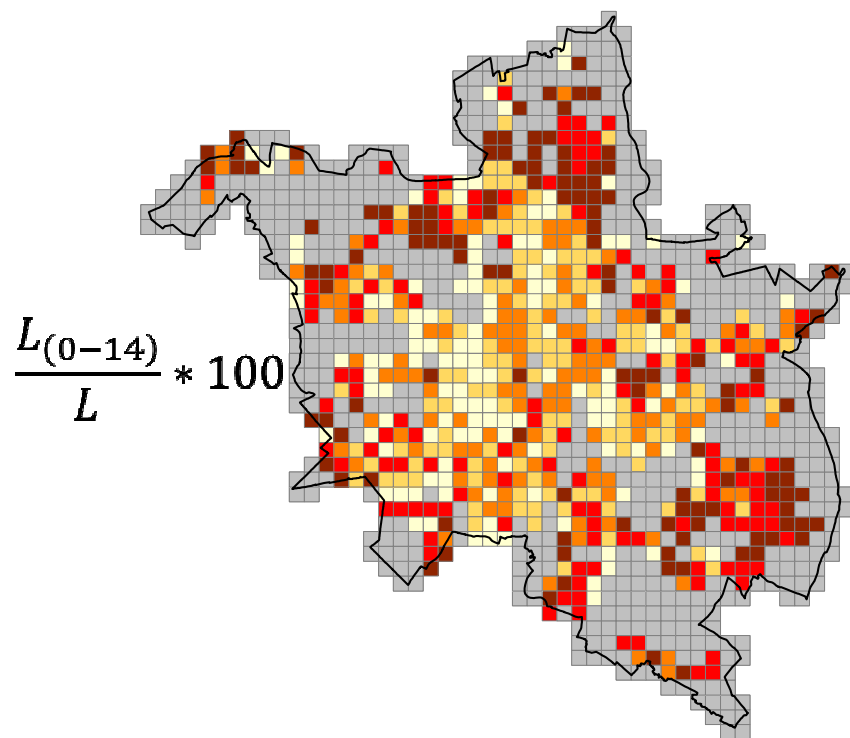

- Area excluded from the research
- Administrative border

Indicators for territorial policies: closing data gaps by using traditional and new sources and methods

## The percentage of people aged 0-14

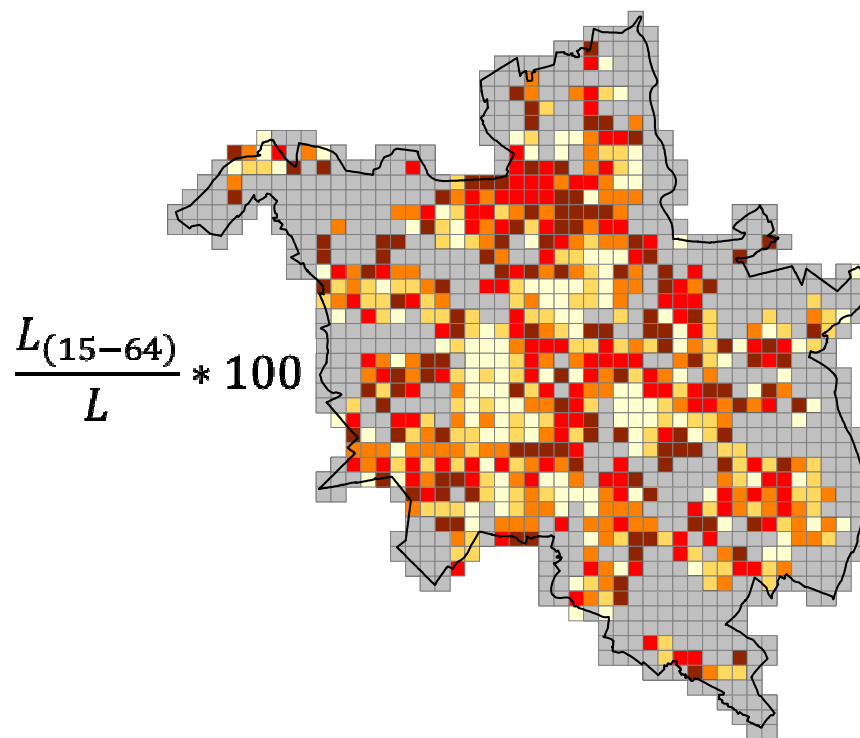

In percent:

- 17,66 and more
- 14,65 - 17,65
- 12,57 - 14,64
- 10,98 - 12,56
- 0,00 - 10,97

Area excluded from the research  
Administrative border

## The percentage of people aged 15-64

In percent:

- 77,20 and more
- 74,12 - 77,19
- 71,89 - 74,11
- 68,76 - 71,88
- 50,64 - 68,75

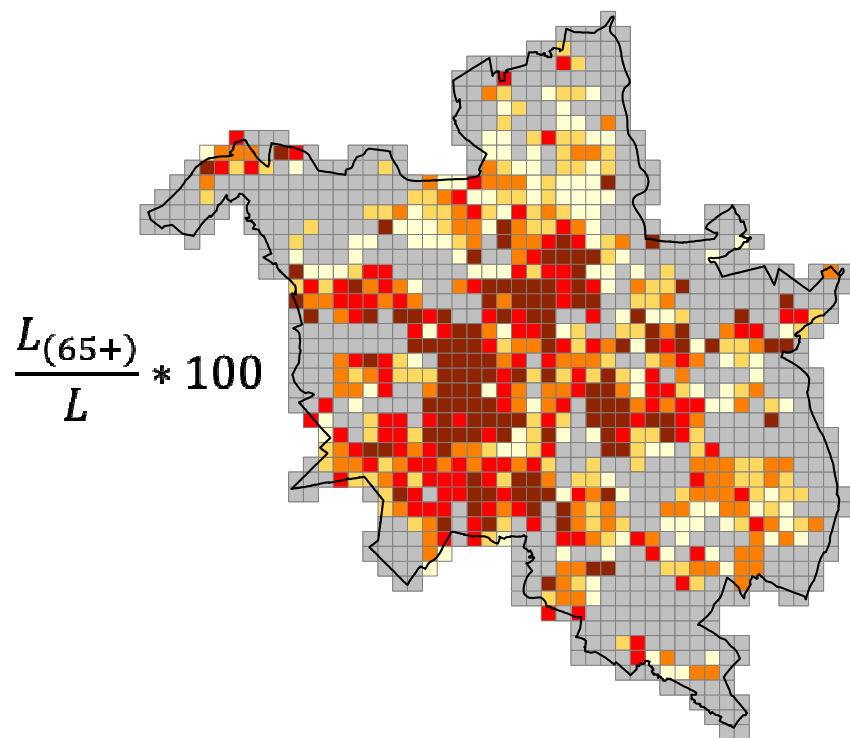

Area excluded from the research  
Administrative border

Indicators for territorial policies: closing data gaps by using traditional and new sources and methods

# The percentage of people aged 65+

# Median age

$$\frac{L(65+)}{L} * 100$$

In percent:

- 17,61 and more
- 13,47 - 17,60
- 10,68 - 13,46
- 7,05 - 10,67
- 0,00 - 7,04

- Area excluded from the research
- Administrative border

In years:

- 43,1 and more
- 40,1 - 43,0
- 37,1 - 40,0
- 34,1 - 37,0
- 34,0 and less

- Area excluded from the research
- Administrative border

## Cyrus Chu's ageing index

$$I = \frac{1}{\omega - z} \sum_{p_j=p_z}^{p_\omega} (j - z) * p_j$$

where:

$I$  – index of elderly people,

$p_j$  – percentage of people in range  $j$ ,

$z$  – the threshold of old age (65),

$\omega$  – the upper limit of the oldest age range

## The UN index of population ageing

$$\frac{L(65+)}{L} * 100$$

The share of people aged 65+ in the total population [%]:

- above 7 (old population)
- 4-7 (mature population)
- below 4 (young population)

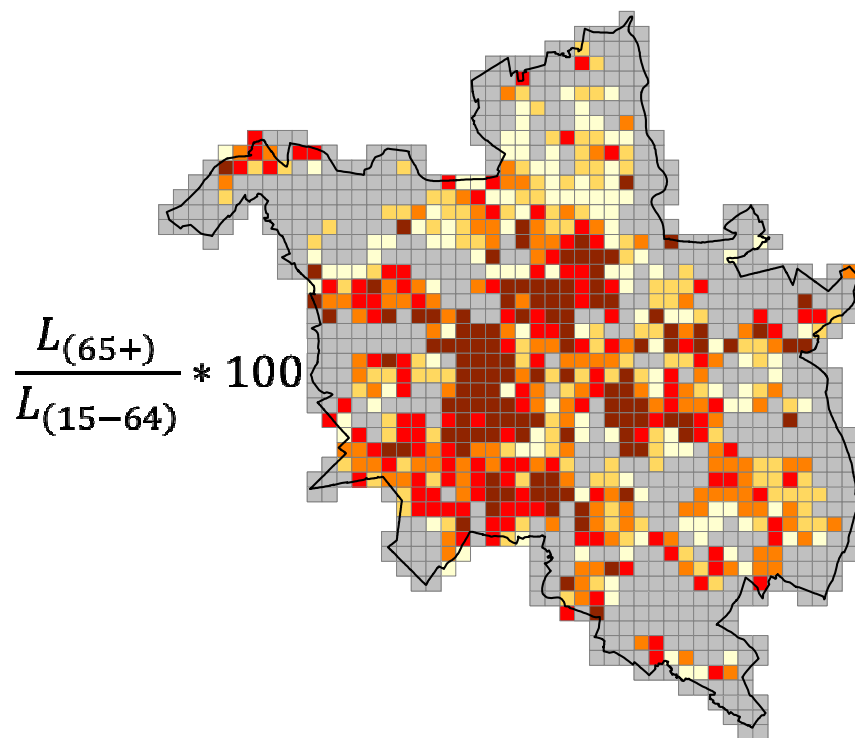

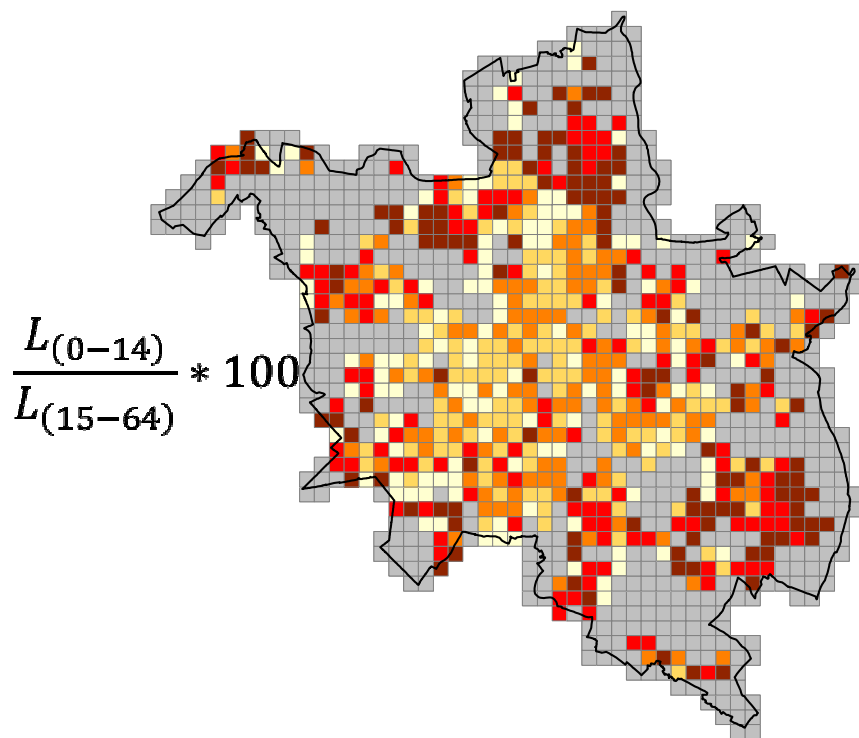

- Area excluded from the research
- Administrative border

Indicators for territorial policies: closing data gaps by using traditional and new sources and methods

# Youth dependency ratio

# Aged dependency ratio

Population aged 0-14  
per 100 people aged 15-64

- 24,60 and more
- 19,63 - 24,59
- 17,29 - 19,62
- 15,21 - 17,28
- 0,00 - 15,20

- Area excluded from the research
- Administrative border

Population aged 65+  
per 100 people aged 15-64

- 25,01 and more
- 18,43 - 25,00
- 14,30 - 18,42
- 9,14 - 14,29
- 0,00 - 9,13

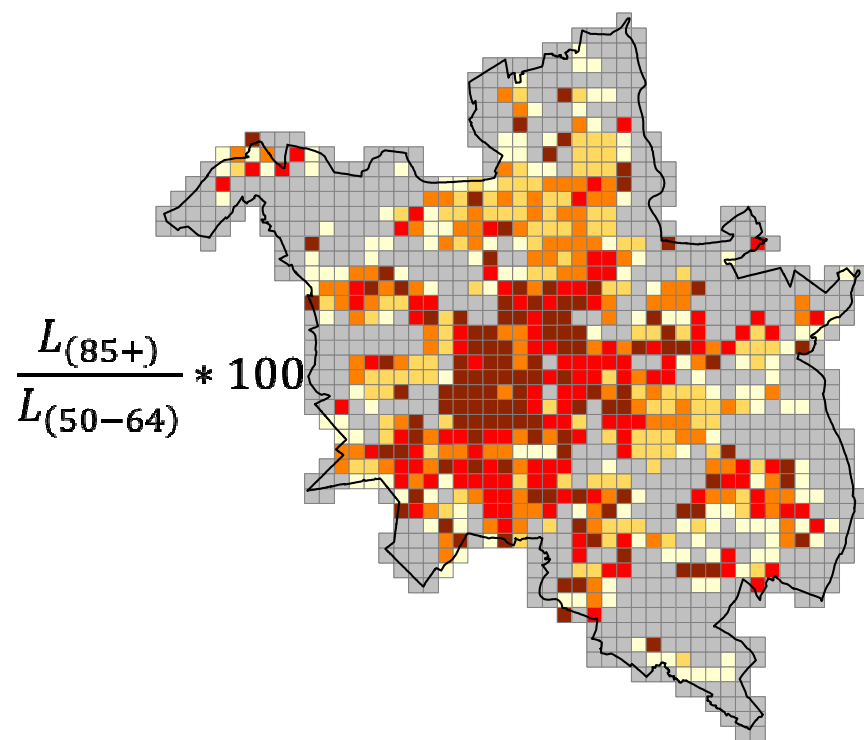

- Area excluded from the research
- Administrative border

Indicators for territorial policies: closing data gaps by using traditional and new sources and methods

# Parent support ratio

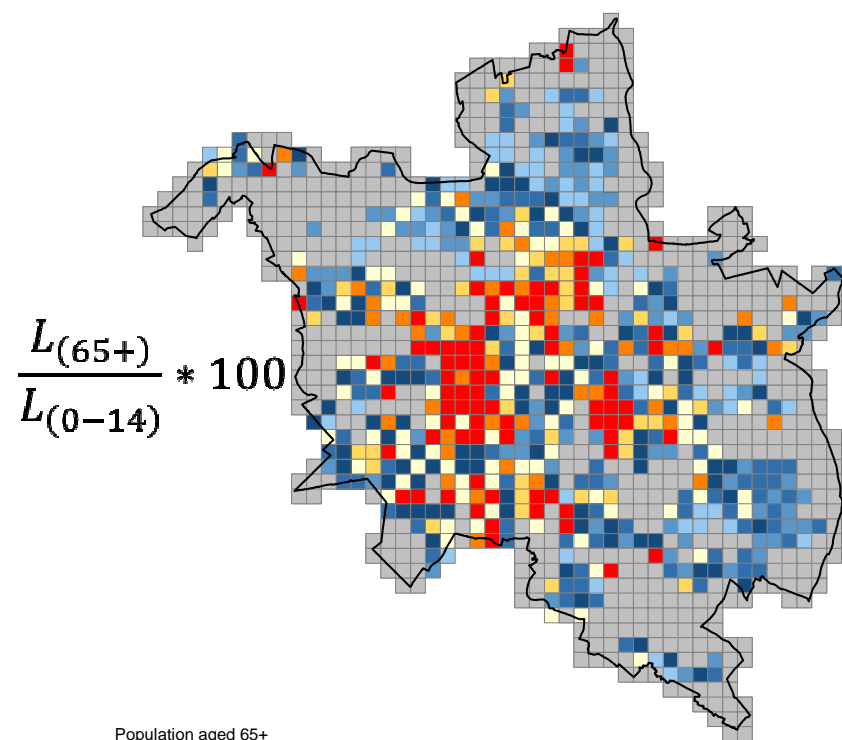

# Ageing index

Population aged 85+ per 100 people aged 50-64

- 11,12 and more
- 7,06 - 11,11
- 3,88 - 7,05
- 0,01 - 3,87
- 0,00

■ Area excluded from the research  
— Administrative border

Population aged 65+ per 100 people aged 0-14

- 175,00 and more
- 150,00 - 174,99
- 125,00 - 149,99
- 100,00 - 124,99
- 75,00 - 99,99
- 50,00 - 74,99
- 25,00 - 49,99
- 24,99 and less

■ Area excluded from the research  
— Administrative border

# Socio-economic structure

1. Share of the total population whose main source of income is **labour**,
  2. Share of the total population whose main source of income is **pension**,
  3. Share of **elderly people** whose main source of income is **wage labour in the total population of elderly people**,
  4. Share of **pensioners and disability benefit claimants** in the total working age population,
  5. Share of **unemployment benefit claimants** in the total working age population,
  6. Share of **social pension or social assistance claimants** in the total population
-

Indicators for territorial policies: closing data gaps by using traditional and new sources and methods

Share of the total population whose main source of income is labour

In percent:

- 54,27 and more
- 50,01 - 54,26
- 47,73 - 50,00
- 45,38 - 47,72
- 21,62 - 45,37

■ Area excluded from the research  
— Administrative border

Share of the total population whose main source of income is pension

In percent:

- 22,10 and more
- 18,49 - 22,09
- 15,64 - 18,48
- 10,87 - 15,63
- 0,00 - 10,86

■ Area excluded from the research  
— Administrative border

# Identification of specific areas

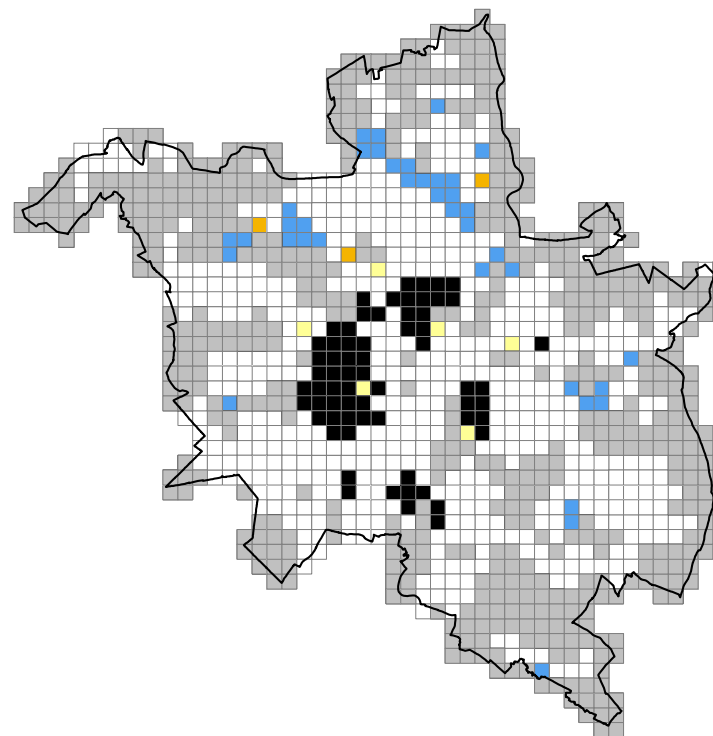

1. Concentration of elderly people
    - local Moran's I statistic
  
  2. The dominant source of income
    - Location quotient
-

Indicators for territorial policies: closing data gaps by using traditional and new sources and methods

## Median age

## Cyrus Chu's ageing index

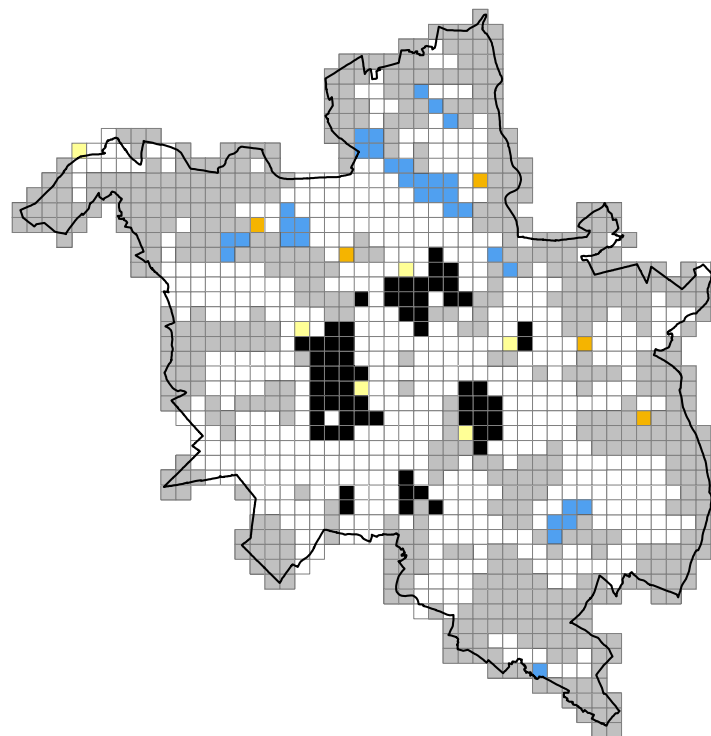

## Parent support ratio

## Aged dependency ratio

# Population ageing index

## High concentration of elderly people areas

Number of occurrences HH:

■ 3-5

— Administrative border

# Main source of income

Main source of income:

- wage labour
- self-employment
- retirement pay/pension
- others

- Area excluded from the research
- Administrative border

# Summary

- The results provide the basis for continuous monitoring and analysis of the socio-economic structure within the provincial cities and their surroundings
-

# Summary

- The proposed approach can be used to explore spatial variation of diverse features and processes, including real estate market, educational level, public safety or healthcare
-

# Discussion

This work has been prepared as part of a project financed from the European Union funds under “Technical Assistance” Operational Programme 2014-2020
